PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
PT   scleroderma.
XX
PS   Example 8; Page 93; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
PT   scleroderma.
XX
PS   Example 8; Page 92; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
```

```
CC   to control EphB4 expression.

PS Example 8; Page 92; 198pp; English.
XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
PT   scleroderma.
XX
PS   Example 8; Page 94; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
```

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

PS   Example 8; Page 92; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
PT   scleroderma.
XX
PS   Example 8; Page 93; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 8; Page 101; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 8; Page 100; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.
XX
PS Example 8; Page 100; 206pp; English.
XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.
XX
PS Example 8; Page 99; 206pp; English.
XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 8; Page 101; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.
XX
PS Example 8; Page 99; 206pp; English.
XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.
XX
PS Example 8; Page 100; 206pp; English.
XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense probe.

PT Novel polynucleotide of molecular variants of Cytochrome P450 2D6
PT (CYP2D6) gene, capable of hybridizing to CYP2D6 gene, is useful in
PT diagnosing disease related to presence of molecular variant of CYP2D6
PT gene.
XX
PS Example 1; SEQ ID NO 16; 33pp; English.
XX
CC The invention relates to a polynucleotide (I) of molecular variants of
CC CYP2D6 gene, chosen from polynucleotide capable of hybridizing to CYP2D6
CC gene, where the polynucleotide consists of substitution of one or more
CC nucleotides at position corresponding to 4784, 4735 or 4087 of the CYP2D6
CC gene having a fully defined sequence (S1) of 9609 base pairs as given in
CC the specification. (I) is useful for identifying a diagnostic
CC composition, which involves (a) isolating (I) from several subgroups of
CC individuals, where one subgroup has no prevalence for CYP2D6 associated
CC disease, and one or more further subgroup(s) do have prevalence for a
CC CYP2D6 associated disease, and (b) identifying a single nucleotide
CC polymorphism by comparing the nucleic acid sequence of the polynucleotide
CC or the gene of one subgroup having no prevalence for a CYP2D6 associated
CC disease, with one or more further subgroup(s) having a prevalence for a
CC CYP2D6 associated disease. (I) is useful for diagnosing a disease related
CC to the presence of a molecular variant of a CYP2D6 gene or susceptibility
CC to such a disorder, which involves determining the presence of (I) in a
CC sample from a subject. (I) is useful for diagnosing whether a subject has
CC EM, IM or PM phenotype, and for determining whether an individual is at
CC risk for a toxic reaction, non-response, insufficient response, or
CC reduced metabolic activity of CYP2D6 to treatment with a CYP2D6
CC substrate. (I) is useful in selecting a subject suffering from a CYP2D6
CC substrate treatable disease for treatment with the substrate, and in
CC treating a subject suffering from a CYP2D6 substrate treatable disease.
CC (I) is useful for detecting variant polynucleotide of CYP2D6 gene in a
CC sample, which involves contacting (I) with the sample under conditions
CC allowing interaction of variant of CYP2D6 gene with several immobilized
CC targets on (I), and determining the binding of the polynucleotide or the
CC gene to the immobilized targets on (I). (I) is useful for diagnosing a
CC disease, which involves binding of the variant polynucleotide of CYP2D6
CC gene or the gene to the immobilized targets on (IV), where the binding
CC indicates the presence or the absence of the disease or a prevalence for
CC the disease. The disease is codeine dependence, depression, hepatitis C,
CC psychosis, schizophrenia or Parkinson's disease. (I) is useful for
CC diagnosing an altered activity of the CYP2D6 enzyme, and for diagnosing a
CC polynucleotide associated with IM phenotype of CYP2D6. (I) is useful in
CC diagnosing individual's genetic constitution of the CYP2D6 status, useful
CC in personalized medicine. (I) is used for prediction of the therapeutic
CC outcome of an individual with an established drug and for avoidance of
CC side effects/toxicity due to altered activity of CYP2D6 mediated by
CC different CYP2D6 alleles. (I) is useful as forensic markers. This
CC sequence corresponds to a PCR primer to amplify the exon 6 region of the
CC CYP2D6 gene for detection polymorphisms.

PT New immunostimulatory oligonucleotide comprising non-palindromic nucleic
PT acid sequence motif, useful for inducing B-cell activation, treating,
PT preventing or ameliorating immune system disorder or tumoral disease e.g.
PT melanoma.
XX
PS Claim 14; SEQ ID NO 26; 139pp; English.
XX
CC This invention relates to novel immunostimulatory oligonucleotides that
CC contain a non-palindromic sequence motif. Specifically, it refers to DNA
CC oligonucleotides (without a CpG motif), which can stimulate an immune
CC response in animals of the order of primate, including humans. The immune
CC response is characterised by the proliferation, differentiation, cytokine
CC and antibody production in B-cells, as well as cell differentiation and
CC cytokine production in plasmacytoid dendritic cells. The present
CC invention describes immunomodulator compositions that also comprise an
CC antigen selected from, for example, viruses, bacteria, parasites, tumour
CC cells and glycolipids. As such, these DNA oligos can be used in gene
CC therapy for inducing B-cell activation, treating, preventing or
CC ameliorating an immune system disorder or a tumoural disease including
CC chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell
CC carcinoma. This oligonucleotide sequence is an immunostimulatory non-CpG
CC variant DNA oligo, used in an exemplification of the invention.

PT   Determining whether a test compound inhibits tyrosine kinase activity in
PT   a mammal by exposing the mammal to the test compound and measuring in the
PT   mammal the level of at least one of the measured proteins or mRNA
PT   transcripts.
XX
PS   Example K; SEQ ID NO 41; 408pp; English.
XX
CC   The invention relates to a novel method for determining whether a test
CC   compound inhibits tyrosine kinase activity in a mammal comprising
CC   measuring in the mammal the level of at least one of the proteins and/or
CC   mRNA transcripts or genes for such proteins comprising type 1 plasminogen
CC   activator inhibitor (PAI-1), TIMP-1 (tissue inhibitor of
CC   metalloproteinase 1), vinculin, vascular endothelial growth factor
CC   (VEGF), placental growth factor (PLGF), VEGF/PLGF heterodimers or
CC   migration inhibitory factor (MIG), exposing the mammal to the test
CC   compound and then measuring in the mammal the level of at least one of
CC   the proteins and/or mRNA transcripts previously measured. The method of
CC   the invention may be useful for determining whether a test compound
CC   inhibits tyrosine kinase activity in a mammal. The current sequence is
CC   that of the PCR primer which was used in the exemplification of the
CC   invention.

PT Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
PT by selecting a target gene and measuring the functionality of the
PT nucleotide sequences that are complementary to a stretch of nucleotides
PT of the target sequence.
XX
PS Example 12; SEQ ID NO 688; 199pp; English.
XX
CC The invention relates to a novel method for selecting siRNA (short
CC interfering RNA) comprising selecting an siRNA molecule of 19-25
CC nucleoside bases by selecting a target gene and measuring the
CC functionality of sequences of 19-25 nucleotides in length that are
CC substantially complementary to a stretch of nucleotides of the target
CC sequence, where the functionality is dependent upon non-target specific
CC criteria. Also claimed are methods for gene-silencing, developing an
CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
CC sequence consisting of GGGAGAUAGUGAUGAAGUA; GAAGUACAUCCAUUAUAAG;
CC GUACGACAACCGGGAGAUA; AGAUAGUGAUGAAGUACAU; UGAAGACUCUGCUCAGUUU;
CC CAUGCGGCCUCUGUUUGA; UGCGGCCUCUGUUUGAUUU; GAGAUAGUGAUGAAGUACA;
CC GGAGAUAGUGAUGAAGUAC; and GAAGACUCUGCUCAGUUUG. The siRNA molecule
CC comprises a sense strand and an anti-sense strand. The siRNA molecule
CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
CC pairs. The kit comprises at least two siRNA, comprising a first optimised
CC siRNA and a second optimised siRNA. The method is useful in selecting
CC siRNA for generating a gene silencing reagent. The present sequence is
CC used in the exemplification of the invention. The sequence is shown in
CC the specification as DNA, but described as siRNA.

PT New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.
XX
PS Example 3; Page 62; 198pp; English.
XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

PT New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.
XX
PS Example 6; Page 89; 198pp; English.
XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 5; Page 81; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   siRNA.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 8; Page 103; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   antisense RNAi probe.

PT   New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT   transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT   useful for diagnosing or treating cancer or angiogenesis-associated
PT   diseases.
XX
PS   Example 3; Page 68; 206pp; English.
XX
CC   The invention relates to an isolated nucleic acid compound comprising at
CC   least a portion that hybridises to an EphB4 or EphrinB2 transcript under
CC   physiological conditions and decreases the expression of EphB4 or
CC   EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC   medicament for the treatment of cancer or angiogenesis-associated
CC   diseases. The composition and methods are useful for diagnosing or
CC   treating cancer or angiogenesis-associated diseases, such as inflammatory
CC   disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC   diseases or scleroderma. The present sequence represents a human EphB4
CC   PCR primer.

PT Use of N-benzoyl-staurosporine in manufacture of medicament for treatment
PT of diabetic retinopathy with reduced hepatotoxicity in patients selected
PT based on genotype of patients at IL1A genetic locus predictive of
PT hepatotoxicity.
XX
PS Example; SEQ ID NO 9; 55pp; English.
XX
CC The invention comprises a method of using N-benzoyl-staurosporine in the
CC manufacture of a medicament for the treatment of diabetic retinopathy
CC with reduced hepatotoxicity in a selected patient population. The patient
CC population is selected on the basis of the genotype of the patients at a
CC genetic locus within the IL1A gene - the IL1A genetic locus is predictive
CC of hepatotoxicity. The method of the invention is useful in the
CC manufacture of a medicament for the treatment of diabetic retinopathy
CC with reduced hepatotoxicity in a selected patient population. The present
CC DNA sequence represents a PCR primer that was used to amplify exons 7, 8
CC and 9 of the human CYP2D6 gene.

PT Eluting nucleic acid from nucleic acid-containing sample e.g., human
PT blood sample on storage media, by contacting sample on storage media with
PT elution buffer, eluting nucleic acid from sample and recovering eluted
PT nucleic acid.
XX
PS Example 1; SEQ ID NO 7; 54pp; English.
XX
CC The invention describes a method of eluting nucleic acid from a nucleic
CC acid-containing sample e.g., human blood sample on storage media. The
CC method involves providing a nucleic acid containing sample, preferably
CC human blood sample on storage media, contacting the sample on storage
CC media with an elution buffer comprising 10 mM Tris having a pH of 11.0-
CC 12.0, preferably 11.5-11.7, eluting nucleic acid from the sample on
CC storage media, and recovering eluted nucleic acid, where the human blood
CC sample is contacted with a wash buffer which is then removed before being
CC contacted with the elution buffer. Also described is a kit (I) for
CC eluting nucleic acid from a nucleic acid containing sample on storage
CC media, comprising an elution buffer having a pH of 11.0-12.0 and
CC instruction unit for eluting nucleic acid from a sample on storage media.
CC (M1) is useful for eluting nucleic acid such as DNA or RNA from a nucleic
CC acid-containing sample, preferably a human blood sample on storage media.
CC (M1) and (I) are useful for optimizing nucleic acid recovery depending on
CC the sample storage media and the intended use. The DNA eluted by (M1) is
CC useful for numerous downstream applications including PCR based

```
CC   applications, short tandem repeat (STR) marker analysis, single
CC   nucleotide polymorphism (SNP) analysis and whole genome amplification
CC   (WGA). (M1) is simple, inexpensive and can be performed rapidly (30-60
CC   minutes). (M1) provides high quality DNA that can be used in various
CC   applications. (M1) avoids the use of toxic materials and is automation-
CC   compatible. This sequence represents a primer used to detect beta-globin
CC   from blood samples.

PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
PT   scleroderma.
XX
PS   Example 8; Page 94; 198pp; English.
XX
CC   The invention describes an isolated soluble polypeptide comprising an
CC   amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC   protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC   polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC   Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC   described are: an antagonist antibody that binds to an extracellular
CC   domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC   EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC   diagnostic kit, comprising the above soluble polypeptide or antagonist
CC   antibody, and a pharmaceutical carrier; methods of inhibiting
CC   angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC   cell; a method of reducing the growth rate of a tumour; methods for
CC   treating a patient suffering from a cancer or an angiogenesis-associated
CC   disease; and a method for identifying a tumor that is suitable for
CC   treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC   antibody is useful for manufacturing a medicament for the treatment of
CC   cancer or an angiogenesis-associated disease. The composition and methods
CC   are useful for diagnosing or treating cancer or angiogenesis-associated
CC   diseases, such as inflammatory disorders, chronic articular rheumatism,
CC   psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC   represents a human ephrin B4 antisense oligonucleotide that can be used
CC   to control EphB4 expression.

PT   New RNA comprising double stranded RNA and a 3' or 5' overhang having a
PT   length of 0-nucleotide to 5-nucleotides on each strand, useful as reverse
PT   genetic and/or therapeutic tools for interfering or inhibiting expression
PT   of a target gene.
XX
PS   Claim 71; SEQ ID NO 177; 176pp; English.
XX
CC   The present invention describes an RNA (I) used for the interference or
CC   inhibition of expression of a target gene, where (I) comprises double
CC   stranded RNA of 15-40 nucleotides in length and a 3' or 5' overhang
CC   having a length of 0-nucleotide to 5-nucleotides on each strand, where
CC   the sequence of the double stranded RNA is substantially identical to a
CC   portion of a mRNA or transcript of the target gene. Also described: (1)
CC   interfering with or inhibiting the expression of a target gene in a cell
CC   by exposing the cell to an amount of (I); (2) a gene silencing array
CC   comprising a substantially flat substrate, and addressably arrayed
CC   different double-stranded RNAs; (3) an array-based method of assessing a
CC   phenotypic effect of a double-stranded RNA on a target gene; (4)
CC   validating a gene as a potential drug target for a disease or condition;
CC   (5) selecting an optimised sequence of a double-stranded RNA for
CC   interference with or inhibition of expression of a target gene in a cell;
CC   and (6) a short double-stranded RNA effective for interfering with or
CC   inhibiting expression of a target gene comprising any of 311 20-78
CC   nucleotide sequences (see ADC16276 to ADC16586). (I) has cytostatic
CC   activity, and can be used in gene therapy. The RNAs are useful as reverse
CC   genetic and/or therapeutic tools for interfering or inhibiting expression
CC   of a target gene. They are useful for treating proliferative diseases,
CC   e.g. cancer.

XX
CC   This invention relates to novel primer sets that can be used to screen a
CC   polynucleotide sample to detect and identify variants in the cytochrome
CC   P450 isoenzyme 2D6 (CYP2D6) gene. The gene is located on chromosome
CC   22q13.1 and contains several single nucleotide polymorphisms, the details
CC   of which are disclosed in the specification. The methods and compositions
CC   of the present invention are useful for screening a polynucleotide sample
CC   to detect and identify variants in the cytochrome P450 isoenzyme 2D6 gene
CC   and detecting low frequency variants affecting pharmaceutical drugs
CC   metabolism. The present sequence is that of a PCR primer which may be
CC   used in the primer sets of the invention.

PT Novel primer set for screening a polynucleotide sample to detect and
PT identify variants in the cytochrome P450 isoenzyme 2D6 (CYP2D6) gene in a
PT polynucleotide sample or a population.
XX
PS Claim 1; SEQ ID NO 25; 47pp; English.
XX
CC The present invention relates to a primer set that can be used to screen
CC a polynucleotide sample to detect and identify variants in the human
CC cytochrome P450 isoenzyme 2D6 (CYP2D6) gene. Also disclosed is a kit for
CC the above screening method, a method for predicting the potential for
CC altered metabolism of a substance, including one or more than one
CC pharmaceutical drug, by a first individual compared to a second control
CC individual, where the substance is metabolised by the CYP2D6 isoenzyme, a
CC purified or isolated variant of wild-type CYP2D6 isoenzyme having one or
CC more than one of the alterations chosen from F-I at position 120, F-F at
CC position 120, E-K at position 155, R-R at position 194, F-F at position
CC 219, L-L at position 276, H-H at position 324, R-STOP at position 344, Y-
CC C at position 355, H-H at position 361, V-FRAMESHIFT at position 363, E-K
CC at position 418, H-Y at position 478 and F-F at position 483. The primer
CC set is useful for screening a polynucleotide sample to detect and
CC identify the presence of one or more than one variant in the CYP2D6 gene
CC in the sample. The primer set permits amplification from a small
CC polynucleotide sample of selected portions of the coding portion of the
CC CYP2D6 gene, or amplification of the entire coding portion of CYP2D6, as
CC well as the flanking intronic sequences that are relevant to recognition
CC of splice sites. The primer set further permits the detection of genetic
CC variants of CYP2D6 without interference from pseudogenes or from
CC homologous or paralogous genes of non-CYP2D6 cytochrome p450 genes. The
CC primer set also permits the detection of low frequency variants that
CC affect pharmaceutical drugs metabolism, thereby decreasing the false
CC negative rate in variant screening. The present sequence represents a PCR
CC primer of the invention.

PT Elucidating RNA transcription profile in eukaryotic cell by producing
PT cloned tags using construct having exon marker sequence and comparing
PT sequence tags to sequence database and identifying RNA transcript
PT specific to sequenced tags.
XX
PS Example 2; SEQ ID NO 5; 32pp; English.
XX
CC The invention relates to elucidating the RNA transcription profile in a
CC eukaryotic cell by introducing into the cell a polynucleotide construct
CC comprising an exon marker sequence, subjecting cDNA obtained by reverse
CC transcription to digestion with a first Type IIS restriction enzyme, self
CC -ligating the fragments, amplifying a region of the fragment containing
CC the exon tags, cloning the fragments, and comparing sequence tags to
CC sequence database. The tags obtained are typically 40 nucleotides in
CC length compared to 20 nucleotides obtained from prior art methods. Also
CC included are a polynucleotide construct (comprising, in a 5' to 3'
CC orientation, a splice acceptor sequence, a type IIS restriction enzyme
CC recognition site oriented so that it is capable of cleaving DNA fused
CC upstream of the 5' end of a marker exon, restriction enzyme recognition
CC site, marker exon, a type IIS restriction enzyme recognition site
CC oriented so that it is capable of cleaving sequences located downstream
CC of the 3' end of the marker exon, and splice donor sequence or comprising
CC a marker exon sequence flanked by a functional 5' splice acceptor
CC sequences and a 3' splice donor sequence, and where the marker exon
CC contains at least two RER sites at the 5' end of the marker exon, at
CC least one the 5' RER sites is recognized by a type IIS restriction enzyme
CC and oriented in such a way that a type IIS restriction enzyme cuts the
CC DNA outside the boundaries that define the marker exon, and the marker
CC exon contains at least two RER sites at the 3' end of the marker exon,
CC where at least one of the 3' RER sites is recognized by a Type IIS
CC restriction enzyme and oriented in such a way that a Type IIS restriction
CC enzyme cuts the DNA outside the boundaries that define the marker exon,
CC and where the restriction recognition sites are located close from the
CC border of the marker exon such that after cutting flanking exons generate
CC sequence tags of at least 8 nucleotides), a vector comprising the above
CC construct, a polynucleotide construct Pgt13, and a polynucleotide
CC construct pGTfso-M. The method further involves ligating the amplified
CC fragments together to form a concatamer prior to cloning. In the method,
CC the polynucleotide construct is contained within a (viral) vector (e.g. a
CC retroviral vector, a lentiviral vector and an adeno-associated viral
CC vector, preferably retroviral vector). The marker exon marker sequence
CC encodes a fluorescent protein, preferably a green fluorescent protein.
CC The method, referred to as SAVI (Serial analysis of vector (or viral)
CC integration) is useful for elucidating a RNA transcription profile in a
CC eukaryotic cell. The method is also useful for functional genome
CC annotation, high throughput sequencing and characterisation of exon-
CC intron boundaries, and for determining the relative transcriptional level
CC of tagged RNA variant. The method of the invention was used to analyse
CC the RNA transcription profile of 107 (unidentified) cells. The present
CC sequence is a nested PCR primer used to amplify the tags in the above
CC experiment.

XX
CC   This invention relates to a novel activated mutant protein tyrosine
CC   kinases and associated methods for diagnosing cancer and screening for
CC   anti-cancer agents. Protein kinases are signalling molecules involved in
CC   tumourigenesis. Mutational analysis of the human tyrosine kinase gene
CC   family identified somatic alteration sin 1 in 5 colorectal cancers, with
CC   the majority of mutations occurring in the NTRK3, FES, GUCY2F and
CC   MCCK/MLK4 genes. Most were identified in the kinase domain. The invention
CC   may be useful for the production of compounds with a cytostatic activity
CC   acting as protein tyrosine kinase inhibitors or guanylate cyclase
CC   stimulators. The invention may be useful for developing methods for
CC   detecting mutations involved in cancer or screening for anti-cancer
CC   agents. The present sequence is that of a human-derived oligonucleotide
CC   which is related to the invention.

PT   Novel antisense compound targeted to nucleic acids encoding human or
PT   mouse CCAAT/enhancer binding protein (C/EBP) beta, useful in vitro for
PT   inhibiting expression of human or mouse C/EBP beta in cells/tissues.
XX
PS   Claim 1; Col 42; 69pp; English.
XX
CC   Sequences ABL94252-ABL94476 represent antisense oligonucleotides targeted
CC   to the human or mouse CCAAT/enhancer-binding protein alpha (C/EBP alpha)
CC   gene, which inhibit its expression. The antisense oligonucleotides were
CC   designed to target different regions of the human and/or mouse C/EBP
CC   alpha RNA, and were analysed for their effect on C/EBP alpha mRNA levels
CC   by quantitative real-time PCR. The C/EBP family of proteins are a family
CC   of transcription factors which regulate the expression of a wide range of
CC   genes that control normal tissue development, cellular function, cellular
CC   proliferation and functional differentiation. C/EBP beta (also known as
CC   C/EPB2, LAP, TCF5, CRP2, NFIL6, IL6DBP, NF-M, AGP/EBP and Apc/EBP)
CC   primarily regulates hormone responsiveness and oxidative stress responses
CC   and is a mediator of IL-6 (interleukin-6) signalling. C/EBP beta is
CC   thought to be involved in carbohydrate metabolism, immunity, the Th1
CC   response, female fertility and gluconeogenic pathways. C/EBP beta is
CC   expressed in the liver, lung, spleen, kidney, brain, and testis, with the
CC   highest expression found in the lung. It is also expressed at a higher
CC   level in malignant ovarian tissue compared with normal ovarian tissue,
CC   and its expression in pancreas is upregulated in response to chronically
CC   elevated levels of glucose, indicating that it is involved in the
CC   impairment of insulin secretion in type II diabetes. The oligonucleotides
CC   of the invention are useful for diagnosis, prevention and treatment of
CC   conditions associated with C/EBP beta expression, such as cancer
CC   (particularly ovarian cancer), tumour formation, diabetes (particularly
CC   type II diabetes), infection, or inflammation

PT   Inferring a statin response from a nucleic acid sample, by haplotype
PT   allele indicative of statin response, a decrease in total cholesterol, or
PT   in low density lipoprotein infers a statin response of the subject.
XX
PS   Example 1; SEQ ID NO 13; 323pp; English.
XX
CC   The invention relates to a novel method for inferring a statin response
CC   from a nucleic acid sample comprising identifying in the nucleic acid
CC   sample, at least one haplotype allele indicative of a statin response.
CC   The haplotype allele may comprise nucleotides of the cytochrome p450 3A4
CC   (CYP3A4) gene, nucleotides of the cytochrome p450 2D6 (CYP2D6) gene or
CC   nucleotides of the 3-hydroxy-3-methylglutaryl-coenzyme A reductase
CC   (HMGCR) gene. The method of the invention may be useful for inferring a
CC   statin response of a human subject from a nucleic acid sample, where the
CC   human subject is a Caucasian subject and the statin is atorvastatin or
CC   simvastatin. The method may also be useful for determining whether to
CC   prescribe statin to a patient with elevated serum cholesterol levels in
CC   order to prevent heart attack. The current sequence is that of the PCR
CC   primer of the invention which was used to identify the human CYP2D6E7_339
CC   polymorphism DNA.

PT   New soluble polypeptides comprising an extracellular domain of EphB4 or
PT   Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT   associated diseases, such as inflammatory disorders, psoriasis or
```

PT scleroderma.
XX
PS Example 6; Page 86; 198pp; English.
XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a primer used in the isolation of human ephrin B4 cDNA.

XX
PT   Identifying and characterizing cells by comparing the pattern of gene
PT   expression in a selected gene family.
XX
PS   Claim 4; Page 48; 102pp; English.
XX
CC   The invention provides a new method for identifying and characterising
CC   cells. The method for determining the genetic proximity of a first cell
CC   and a second cell comprises: (a) obtaining the first cell and the second
CC   cell; (b) determining in the first cell and the second cell the pattern
CC   of expression of genes in a selected gene family; and (c) calculating a
CC   proximity index using a specified formula. The methods can be used for
CC   characterising cells, e.g. for determining the origin of a cell, its
CC   genetic status, whether it carries a genetic defect, or whether it is
CC   transformed. They can be used for detecting a selected genetic defect in
CC   an individual, e.g. a fetus. They can also be used for determining the
CC   effect of a selected treatment on a test cell. They can also be used for
CC   obtaining cells capable of expressing an homeobox related desired
CC   property. The method uses reverse transcriptase polymerase chain reaction
CC   (RT-PCR) for determining the pattern of gene expression in a selected
CC   gene family. Sequences AAZ17803-Z18342 represent primers that can be used
CC   in the RT-PCR reactions to determine the pattern of gene expression. The
CC   gene family can be selected from a set of homeobox genes, kinase genes,
CC   protein phosphatase genes, P450 enzyme genes, steroid receptor
CC   superfamily genes or cadherin superfamily genes

PT   Transforming growth factor beta-receptor II, useful for preparing a
PT   composition for treating hyperproliferative disorder e.g., lung, liver,
PT   colon or gastric cancer.
XX
PS   Claim 3; SEQ ID NO 53; 141pp; English.
XX
CC   The invention comprises antisense oligonucleotides that are targeted to
CC   the nucleic acid encoding transforming growth factor beta (TGF-beta)
CC   receptor II. The antisense oligonucleotides of the invention are useful
CC   for treating: hyperproliferative disorders (e.g. breast cancer), or an
CC   autoimmune disorder (e.g. rheumatoid arthritis). The present DNA sequence
CC   represents a 2'-O-methoxyethyl gapmer oligonucleotide with a
CC   phosphorothioate backbone that is targeted to human TGF-beta receptor II.

PT   Selecting agents useful for treating Alzheimer's disease comprises
PT   contacting focal adhesion kinase 2 with a test agent and measuring a
```

PT biological activity related to focal adhesion kinase 2 function with or
PT without the test agent.
XX
PS Disclosure; SEQ ID NO 6; 247pp; English.
XX
CC The present invention relates to a method for selecting agents that are
CC potentially useful for the treatment of Alzheimer's disease. The method
CC comprises contacting Focal Adhesion Kinase 2 (FAK2) with a test agent and
CC measuring a biological activity related to FAK2 function in the presence
CC and absence of the test agent. The method is useful for screening
CC compounds or agents that can be used to treat neurological disorders,
CC ailments and diseases including mild cognitive impairment, depression,
CC schizophrenia, obsessive-compulsive disorder, bipolar disorder, and
CC neurodegenerative diseases and disorders and motor neuron diseases and
CC disorders such as Alzheimer's disease, Parkinson's disease, dementia with
CC Lewy bodies, amyotrophic lateral sclerosis or Lou Gehrig's disease,
CC Alpers' disease, Leigh's disease, Pelizaeus-Merbacher disease,
CC Olivopontocerebellar atrophy, Friedreich's ataxia, leukodystrophies, Rett
CC syndrome, Ramsay Hunt syndrome type II, and Down's syndrome, as well as
CC for treating or preventing other diseases such as dislipidemia, diabetes,
CC obesity, cardiovascular diseases such as atherosclerosis and coronary
CC heart disease. Also disclosed is the coding sequence for a novel human
CC phosphatase called PN7740 (ADU78628 and ADU78629). PN7740 contains a
CC protein phosphatase 2C domain, which likely acts to dephosphorylate
CC specific phospho-serine or phospho-threonine residues on particular
CC protein substrates. Although the precise role played by protein
CC phosphatase 2Cs in Alzheimer's disease pathogenesis has yet to be
CC defined, the inventors have discovered that fragments of PN7740 interact
CC with the first phosphotyrosine binding domain (PTB) domain of Fe65 (also
CC known as APBB1(710) or amyloid beta (A4) precursor protein-binding,
CC family B, member 1, isoform E9 (710)), suggesting that PN7740 may well be
CC involved somehow. Fe65 is known to interact with the cytosolic C-terminal
CC region of Amyloid beta (A4) precursor protein (APP) and APP metabolism is
CC critical to the pathogenesis of Alzheimer's disease, because it leads to
CC the release of either toxic Abeta or trophic secreted APP (sAPP)
CC metabolites. The present sequence is an antisense oligonucleotide which
CC can be used in antisense therapy for Alzheimer's disease.

PT Use of mixed lineage kinase family kinase inhibitor in the manufacture of
PT a medicament for treatment of asthma associated at-risk haplotype for
PT asthma, at-risk haplotype in MAP3K9 gene or increased MLK1 protein
PT expression or activity.
XX
PS Disclosure; Fig 12; 640pp; English.
XX
CC The invention relates to the novel use of a mixed lineage kinase (MLK)
CC family kinase inhibitor for treating asthma. Where the asthma is
CC associated with a risk factor selected from an at-risk haplotype for
CC asthma, at-risk haplotype in MAP3K9 gene, polymorphism in MAP3K9 nucleic
CC acid, dysregulation of MAP3K9 mRNA expression, dysregulation of a MAP3K9
CC mRNA isoform, and/or increased MLK1 protein expression. The invention
CC further comprises: a method for the diagnosis or identification of
CC susceptibility to asthma; a method for the use of a first nucleic acid
CC molecule for diagnosing asthma or susceptibility to asthma in a sample; a
CC method for assaying the presence of a first nucleic acid molecule in a
CC sample; a method for assessing the response to treatment with an MLK
CC family kinase nucleic acid inhibitor in a target population or in an
CC individual with an at-risk haplotype for asthma, at-risk haplotype in the
CC MAP3K9 gene, polymorphism in the MAP3K9 nucleic acid, dysregulation of
CC MAP3K9 mRNA expression, dysregulation of MAP3K9 mRNA isoform, increased
CC MLK1 protein expression, increased MLK1 biochemical activity or increased
CC MLK1 protein isoform expression; a method for assessing the response to
CC treatment with an MLK1 inhibitor in a target population including an
CC individual with an at-risk haplotype for asthma, as above; a kit for
CC assaying a sample for the presence or absence of at least one haplotype
CC comprising 2 or more alleles associated with asthma comprising: at least
CC one nucleic acid capable of detecting the presence or absence of at least
CC one specific allele; a reagent kit for assaying the presence of at least
CC one haplotype comprising 2 or more alleles comprising: at least one
CC labeled nucleic acid capable of detecting at least one specific allele of
CC the haplotype, and reagents for detection of the label; and a reagent kit
CC for assaying a sample for the presence of at least one haplotype
CC comprising 2 or more alleles comprising: at least one nucleic acid
CC comprising at least one nucleotide sequence that is at least partially
CC complementary to a part of nucleotide sequence of MAP3K9, capable of
CC acting as a primer for a primer extension reaction and capable of
CC detecting 2 or more specific alleles of the haplotype. The MLK family
CC kinase inhibitor has the following activities: antiasthmatic, respiratory
CC -gen., antiinflammatory, antirheumatic, antiarthritic, antipsoriatic,
CC neuroprotective, and gastrointestinal-gen. The MLK family kinase
CC inhibitor is useful for the treatment of asthma associated with a risk
CC factor selected from at-risk haplotype for asthma, at-risk haplotype in
CC MAP3K9 gene, polymorphism in MAP3K9 nucleic acid, dysregulation of MAP3K9
CC mRNA expression, dysregulation of MAP3K9 mRNA isoform, increased MLK1
CC protein expression, increased MLK1 biochemical activity and/or increased
CC MLK1 protein isoform expression; and in diagnosis or identification of
CC susceptibility to asthma. The inhibitor is also useful for the treatment
CC of other respiratory diseases associated with MAP3K9 or other members of
CC the JNK pathway such as chronic obstructive pulmonary disease, chronic
CC bronchitis and other inflammatory diseases such as rheumatoid arthritis,
CC psoriasis, multiple sclerosis and inflammatory bowel disease. This
CC polynucleotide sequence represents a reverse primer which is used in
CC amplifying a marker of the MAP3K9 kinase, where MAP3K9 is a part of
CC Mitogen-Activated Protein Kinase (MAPK) signal transduction pathways, of
CC the invention.

PT Identifying and characterizing cells by comparing the pattern of gene
PT expression in a selected gene family.
XX
PS Claim 4; Page 46; 102pp; English.
XX
CC The invention provides a new method for identifying and characterising
CC cells. The method for determining the genetic proximity of a first cell
CC and a second cell comprises: (a) obtaining the first cell and the second
CC cell; (b) determining in the first cell and the second cell the pattern
CC of expression of genes in a selected gene family; and (c) calculating a
CC proximity index using a specified formula. The methods can be used for
CC characterising cells, e.g. for determining the origin of a cell, its
CC genetic status, whether it carries a genetic defect, or whether it is
CC transformed. They can be used for detecting a selected genetic defect in
CC an individual, e.g. a fetus. They can also be used for determining the
CC effect of a selected treatment on a test cell. They can also be used for
CC obtaining cells capable of expressing an homeobox related desired
CC property. The method uses reverse transcriptase polymerase chain reaction
CC (RT-PCR) for determining the pattern of gene expression in a selected
CC gene family. Sequences AAZ17803-Z18342 represent primers that can be used
CC in the RT-PCR reactions to determine the pattern of gene expression. The
CC gene family can be selected from a set of homeobox genes, kinase genes,
CC protein phosphatase genes, P450 enzyme genes, steroid receptor
CC superfamily genes or cadherin superfamily genes

PT   New isolated mutant HERG nucleic acids, useful for developing products
PT   for the diagnosis, prevention and treatment of long QT syndrome.
XX
PS   Claim 7; Page 72; 163pp; English.
XX
CC   The invention relates to a HERG protein having a mutation compared to
CC   wild-type HERG, and is useful for developing products for the diagnosis,
CC   prevention and treatment of long QT (LQT) syndrome. The products and
CC   methods can be used for the diagnosis of subjects with LQT syndrome. They
CC   can also be used to screen for drugs for treating or preventing LQT
CC   syndrome. The HERG nucleic acids can also be used for gene therapy and
CC   HERG peptides can be used for peptide therapy. Sequences AAA07654-693
CC   represent primers for amplifying HERG exons

PT   Reagent for modulating the activity of a protein phosphatase 2C-like
PT   enzyme, used for treating diseases, such as, obesity or diabetes,
PT   comprises e.g. a polynucleotide, polypeptide, ribozyme, or antisense
PT   oligonucleotide.
XX
PS   Example 10; Page 83; 121pp; English.
XX
CC   The present sequence is a forward primer for the human protein
CC   phosphatase 2C-like enzyme (PP2CLE) gene (see ABZ58379). The primer was
CC   used in a Taqman quantitative analysis to determine expression of PP2CLE
CC   in different tissues and cell lines. High expression was observed in
CC   spinal cord, uterus, skeletal muscle, mammary gland, kidney, trachea,
CC   colon and brain, in primary cultured alveolar type II cells, cultured
CC   small airway epithelial cells and in cultured human bronchial epithelial
CC   cells. The invention provides PP2CLE polynucleotides, polypeptides,
CC   expression vectors, host cells and methods of producing PP2CLE
CC   polypeptides and detecting PP2CLE polynucleotides. Also provided are
CC   methods of using the polypeptides and polynucleotides to screen for
CC   reagents which decrease or modulate the activity of PP2CLE. Claimed
CC   pharmaceutical compositions comprising an expression vector or an
CC   identified reagent are used to modulate the activity of PP2CLE in a
CC   disease, especially central nervous system (CNS) disorders, chronic
CC   obstructive pulmonary disorder, obesity and diabetes (claimed). Other
CC   diseases that can be treated include Alzheimer's disease, Parkinson's
CC   disease, and pain associated with CNS disorders

PT   Pharmaceutical composition comprising an agent capable of modulating an
PT   expression level or protein activity of a gene, e.g. ABCC4, or a T cell
PT   activated by the polypeptide or antibody, and a carrier, useful for
PT   treating cancer.
XX
PS   Claim 3; SEQ ID NO 4062; 113pp; English.
XX
CC   The present invention relates to a novel pharmaceutical composition
CC   comprising: (a) an agent capable of modulating an expression level or
CC   protein activity of a cancer-related transmembrane protein (CRTP) or gene
CC   ; an antibody specific for a CRTP, or a T cell activated by a CRTP; and
CC   (b) a carrier. The pharmaceutical composition may also comprise a
CC   polynucleotide capable of inhibiting or decreasing the expression of the
CC   CRTP by RNA interference or an antisense mechanism. The CRTPs of the
CC   invention are selected from ABCC4, C20orf103, CACNA1D, CDH6, CST, ENPP3,
CC   FLJ11856, GPR54, HAVCR1, SLC6A3, SLC30A4, TRG, and TRPM4. The
CC   pharmaceutical composition is useful for treating cancer, e.g. colon
CC   cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney
CC   cancer, stomach cancer, and esophageal cancer. The present sequence is a
CC   CRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Antisense compounds capable of modulating expression of human Her-3,
PT   member of epidermal growth factor family of receptor/tyrosine kinases,
PT   useful for preventing or delaying infection, inflammation or tumor
PT   formation.
XX
PS   Claim 1; Col 42; 49pp; English.
XX
CC   The invention provides antisense compounds capable of inhibiting the
CC   expression of human Her-3, a member of epidermal growth factor (EGF)
CC   family of receptor/tyrosine kinases. The antisense oligonucleotides are
CC   useful for inhibiting the expression of Her-3 in cells or tissues. They
CC   are commonly used as research reagents and in diagnostics for example, to
```

```
CC   elucidate the function of particular genes. The antisense compounds are
CC   also useful for distinguishing between functions of various members of a
CC   biological pathway and for research use. They are also utilized for
CC   diagnostics, therapeutics, prophylaxis and in kits. They are useful
CC   prophylactically, e.g. to prevent or delay infection, inflammation or
CC   tumor formation. Sequences AAH47532-47615 represent chimeric antisense
CC   phosphorothioate oligonucleotides having 2'-MOE wings and a deoxy gap,
CC   used for the inhibition of Her-3 mRNA expression

XX
PT   Identifying a candidate polymorphic repeat within a coding sequence, for
PT   understanding or treating genetic disease, comprises detecting tandem
PT   repeats in a target coding sequence and scoring the repeats for
PT   polymorphic probability.
XX
PS   Example; Col 1165; 588pp; English.
XX
CC   The invention discloses a method for identifying a candidate polymorphic
CC   repeat within a coding sequence (expressed sequence tag, EST), which
CC   comprises detecting tandem repeats in a target coding sequence, scoring
CC   the repeats for polymorphic probability and generating a dataset
CC   correlating the repeats with polymorphic probability to identify a
CC   candidate polymorphic repeat. The computational methods (polymorphic
CC   marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC   useful for identifying and detecting candidate polymorphic repeats in
CC   human genes, which can be used to understand, treat or eliminate genetic
CC   diseases, predispositions or adverse drug-treatment reactions. Examples
CC   of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC   syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis,
CC   myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
CC   spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC   the polymorphic repeats identified for a search of human ESTs

XX
CC   AAX91991-X97517 represent PCR primers used to amplify open reading frames
CC   and other nucleic acid sequences from the genome of Chlamydia pneumoniae
CC   (see AAX91990). C. pneumoniae causes respiratory disease such as
CC   pneumonia and bronchitis and is thought to be a contributing factor in
CC   heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema
CC   nodosum or pharyngitis. The polypeptides encoded by the open reading
CC   frames of the C. pneumoniae genome (see AAY34584- AAY35879) can be used
CC   in immunogenic compositions as vaccines. Vectors containing C. pneumoniae
CC   nucleotides sequences can also be used as immunogenic compositions,
CC   especially where the vector directs the expression of a neutralising
CC   epitope of C. pneumoniae

```

```
CC   The invention describes a compound (I) 8-80 nucleobases in length
CC   targeted to a nucleic acid molecule encoding hydroxysteroid 11-beta
CC   dehydrogenase 1, inhibiting expression of hydroxysteroid 11-beta
CC   dehydrogenase 1. The methods and compositions of the present invention
CC   are useful for treating disorders associated with hydroxysteroid 11-beta
CC   dehydrogenase 1 expression, such as osteoporosis, depression and
CC   metabolic disorders like obesity, diabetes, atherosclerosis and
CC   hyperlipidaemia. This sequence represents an antisense oligonucleotide
CC   used to control the expression of mouse hydroxysteroid 11-beta
CC   dehydrogenase 1.

PT   Novel SCN5A gene of sodium channel alpha subunit, with mutations in which
PT   glycine being substituted by serine, and serine being substituted by
PT   leucine, at specific positions, useful as marker for diagnosing Brugada
PT   syndrome.
XX
PS   Example 1; Page; 30pp; Japanese.
XX
CC   The invention relates to an novel SCN5A gene of a sodium channel alpha
CC   subunit. The novel SCN5A gene comprises the mutation G292S between the
CC   fifth and sixth membrane passing-through subunits of the first domain;
CC   and/or the mutation S835L of the intracellular loop between the fourth
CC   and fifth membrane passing-through subunits of the second domain. The
CC   novel SCN5A gene can be used as a Brugada syndrome marker, for diagnosing
CC   Brugada syndrome. Brugada syndrome causes idiopathic ventricular
CC   fibrillation, thus the gene/marker allow for the prevention or treatment
CC   of the syndrome. This oligo sequence represents a primer used to amplify
CC   an exon of the SCN5A gene of the invention.

PT and transfected cells.
XX
PS Disclosure; Page 425; 720pp; French.
XX
CC The invention relates to a novel isolated 17 mer nucleic acid sequence,
CC given in the specification, a sequence containing at least 15 consecutive
CC nucleotides from the 17 mer sequence, a sequence with, after optimal
CC alignment, at least 80 % identity to the 17 mer sequence, a sequence that
CC hybridizes to them under highly stringent conditions, or the complement
CC of any of them, or the corresponding RNA. The novel isolated nucleic
CC acids of the invention are useful as probes and primers for detecting,

```
CC   identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
CC   component of a gene chip, in vitro as (anti)sense reagents, and for
CC   production of recombinant polypeptides. Any of the nucleic acids,
CC   polypeptides, vectors containing the nucleic acids, cells containing the
CC   vector or antibodies directed against the polypeptides are useful for
CC   preparation of pharmaceuticals for prevention and/or treatment of viral
CC   diseases that are characterised by development of tumours or cell
CC   degeneration, specifically cancer but also Alzheimer's disease and
CC   schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
CC   patient samples is useful for diagnosis and/or prognosis of these
CC   diseases. The polypeptides can also be used to generate antibodies, and
CC   both the polypeptide and antibodies are useful as components of protein
CC   chips. The nucleic acid sequences of the invention can be used in gene
CC   therapy. This polynucleotide sequence represents a tumour suppression
CC   related human fukutin oligonucleotide of the invention

XX
CC   This invention relates to novel isolated nucleic acid sequences involved
CC   in the phenomena of tumour suppression, tumour reversion, apoptosis
CC   and/or resistance to viruses. The invention may be useful for the
CC   development of compounds with a cytostatic, virucide, neuroprotective,
CC   nootropic or neuroleptic activity. The DNA sequences may be useful as
CC   probes and primers for detecting, indentifying, quantifying and/or
CC   amplifying nucleic acid, for example as one component of a gene chip, in
CC   vitro as antisense reagents and for production of recombinant
CC   polypeptides. The invention may therefore be useful for preparation of
CC   pharmaceuticals for prevention and/or treatment of viral diseases that
CC   are characterised by development of tumours or cell degeneration,
CC   specifically cancer but also Alzheimer's disease and schizophrenia. The
CC   present sequence is that of a nucleic acid sequence of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/publishedpct_sequences

CC   This sequence represents an isolated nucleic acid sequence associated
CC   with tumour suppression or regression, apoptosis or virus resistance. The
CC   invention relates to these sequences or sequences having at least 80%
CC   identity to them, and polypeptides encoded by the sequences or
CC   polypeptides having 80% identity to the polypeptide sequences. The
CC   invention is used to diagnose or treat viral disease or disease
CC   characterized by development of tumour cells or cellular degeneration

XX
PT   Treating proliferative skin or eye diseases and scarring, using ribozymes
PT   that cleave RNA encoding cytokines involved in inflammation, matrix
PT   metalloproteinases, growth factors and cell-cycle dependent kinases.
XX
PS   Example 1; Page 77; 408pp; English.
XX
CC   The present invention describes a method for treating a proliferative
CC   skin or eye disease and scarring. The method involves administering a
CC   ribozyme (I) which cleaves RNA encoding a cytokine involved in
CC   inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
CC   dependent kinase, growth factor or a reductase, or administering a
CC   nucleic acid molecule (II) comprising a promoter operably linked to a
CC   nucleic acid segment encoding (I). (I) can have antipsoriatic,
CC   dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling,
CC   ophthalmological, vulnerary, keratolytic and virucide activities, and
CC   cleaves RNA encoding cytokine involved in inflammation. (I) can be used
CC   in gene therapy. (I) and (II) are useful for treating proliferative skin
CC   diseases such as psoriasis, atopic dermatitis, actinic keratosis,
CC   squamous or basal cell carcinoma and viral or seborrheic wart. They can
CC   also be used for treating proliferative eye diseases such as diabetic
CC   retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of
CC   prematurity and retinal detachment, and for treating and preventing
CC   scarring such as keloid, adhesion and hypertrophic or hypertrophic burn
CC   scar. AAH57577 to AAH62099 represent sequences used in the
CC   exemplification of the present invention

XX
PS Example 2; Page 278; 311pp; English.
XX
CC The invention relates to a set of novel map-related biallelic markers,
CC preferably located on obesity disorder-associated chromosomal regions on
CC chromosomes 3, 10 and 19. The markers are useful for genotyping or
CC estimating the frequency of an allele in a population, for detecting an
CC association between a genotype or haplotype and a phenotype, e.g. a
CC disease involving drug responses, obesity or disorders related to
CC obesity, such as hyperuricaemia, digestive pathology, hepatic function
CC disorders, cancer, cardiovascular disease, hypertension, hyperlipidaemia,
CC insulin disorders, atheromatous disease and cardiac insufficiency. The
CC markers are useful for detecting a statistical correlation between a
CC biallelic marker allele and a phenotype and/or between a biallelic marker
CC haplotype and a phenotype. This sequence represents a PCR primer used to
CC amplify a human obesity-associated biallelic marker

PT agents.
XX
PS Disclosure; SEQ ID NO 1514; 363pp; English.
XX
CC This invention relates to a novel activated mutant protein tyrosine
CC kinases and associated methods for diagnosing cancer and screening for
CC anti-cancer agents. Protein kinases are signalling molecules involved in
CC tumourigenesis. Mutational analysis of the human tyrosine kinase gene
CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
CC MCCK/MLK4 genes. Most were identified in the kinase domain. The invention
CC may be useful for the production of compounds with a cytostatic activity
CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
CC stimulators. The invention may be useful for developing methods for
CC detecting mutations involved in cancer or screening for anti-cancer
CC agents. The present sequence is that of a human-derived oligonucleotide
CC which is related to the invention.

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 14488; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an

```
CC   antiinflammatory steroid in a subject, for reducing or depleting levels
CC   of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC   receptor, producing bronchodilation, increasing levels of ubiquinone or
CC   lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC   lung inflammation, lung allergies, or a respiratory disease or condition.
CC   Note: The sequence data for this patent is not represented in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   nucleic acids associated with lung airway or lung dysfunction, and
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 14488; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

XX
CC   The present invention relates to an oligonucleotide anti-sense to e.g.,
```

```
CC   initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-
CC   end of nucleic acid target comprising gene(s) chosen from e.g.
CC   interleukin (IL)-4 receptor, IL-5 receptor or salts of the
CC   oligonucleotide and optionally surfactant operatively linked to the
CC   oligonucleotide. The method is useful for preventing or treating a
CC   respiratory or lung disease, which involves administering to the airways
CC   of a subject an effective amount of an inhibitor. The oligonucleotide is
CC   useful for production of a medicament for the prevention and/or treatment
CC   of a respiratory or lung disease. The respiratory or lung disease is
CC   chosen from airway inflammation, allergy(ies), asthma, impeded
CC   respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
CC   (COPD), allergic rhinitis (AR), acute respiratory distress syndrome
CC   (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway
CC   obstruction. The present sequence represents an oligonucleotide of the
CC   invention.

PT Novel primer for diagnosing polycystic kidney disease-associated
PT disorder, comprises regions having sequence that selectively hybridizes
PT to polycystic kidney disease gene sequence.
XX
PS Claim 6; Page 101; 192pp; English.
XX
CC The present invention relates to compositions and methods useful for the
CC identification and detection of polycystic kidney disease (PKD1) gene
CC mutations. The invention also relates to primers comprising a 5' region
CC having a sequence that selectively hybridises to a PKD1 gene sequence and
CC optionally, to a PKD1 homologue sequence and an adjacent 3' region having
CC a sequence that selectively hybridises to a PKD1 gene sequence and not to
CC a PKD1 homologue sequence. Primer pairs of the invention are useful for
CC detecting the presence or absence of a mutation in a PKD1 polynucleotide
CC in a sample, for identifying a subject at risk for a PKD1-associated
CC disorder such as autosomal dominant polycystic kidney disease (ADPKD) or
CC acquired cystic disease and for diagnosing a PKD1- associated disorder in
CC a subject. They are useful for selectively amplifying a region of a PKD1
CC gene. PKD1 DNA fragments are useful detecting the presence of a mutant
CC PKD1 polynucleotide in a sample, as a probe for an amplification
CC reaction, in hybridisation or amplification assays of biological samples
CC to detect abnormalities of PKD1 expression and for engineering transgenic
CC animals. The present sequence is a PCR primer used to detect mutation in
CC human PKD1 gene

PT Determining the presence of a CYP2D6 target sequence in a DNA sample
PT containing CYP2D6 nucleic acid, for detecting mutations or polymorphisms,
PT comprises detecting the scattered light from a particle bound to the
PT target sequence.
XX
PS Claim 14; Page 50; 66pp; English.
XX
CC The invention relates to a method of determining the presence or absence
CC of a CYP2D6 target sequence in a DNA sample containing CYP2D6 nucleic
CC acid. Determining the presence or absence of a CYP2D6 target sequence in
CC a sample of DNA containing CYP2D6 nucleic acid comprises contacting the
CC nucleic acid with a probe under stringent binding conditions, and
CC detecting the presence or absence of the target sequence bound with the
CC probe with a scattered light detectable particle, by observing light
CC scattered from the particle which indicates the presence of the target
CC sequence. The method is useful for determining the presence or absence of
CC particular single nucleotide polymorphisms or alleles in genomic nucleic
CC acid, especially in a pharmacogenetically relevant gene or genes in a DNA
CC sample, and to detect and measure one or more target sequences in a
CC sample. The method may also be used to detect specific mutations to
CC identify the phenotypic classification of an individual. ABK30162-
CC ABK30230 represent CYP2D6 target sequence-specific primers of the
CC invention

XX
PT Determining a cytochrome P450 2D6 (CYP2D6) genotype of an individual,
PT useful for identifying polymorphisms in the CYP2D6 metabolic enzyme, by
PT using primers that hybridize to genomic DNA comprising a CYP2D6 exon 1
PT C188T polymorphisms.
XX
PS Example 1; Page 13; 32pp; English.
XX
CC The present sequence is a forward primer specific to the human human
CC cytochrome P450 CYP2D6*36 allele. CYP2D6 enzyme catalyses the oxidation
CC of e.g. tricyclic antidepressants, antiarrhythmics, neuroleptics and
CC morphine derivatives. 68 Alleles have been identified, over 30 of them
CC associated with alterations in drug metabolism. The CYP2D6*10 haplotype
CC consists of 4 single nucleotide polymorphisms, including a C188T mutation
CC in exon 1 that results in an unstable enzyme with lower metabolic
CC activity. The invention provides a method of determining the CYP2D6
CC genotype of an individual, especially an Asian, by amplification of
CC genomic DNA using primers specific for the exon 1 C188T polymorphism or
CC for the wild-type sequence and analysis of amplification products. In
CC examples from the invention, a CYP2D6*10 duplication was identified.
CC CYP2D6*36 is a subvariant of CYP2D6*10, and PCR amplification of
CC CYP2D6*36 was used to examine the structure of the CYP2D6*10-associated
CC gene duplication

CC The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of the vascular
CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC that express siNA; and (5) single-stranded siNA with similar properties.
CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC gynaecological activities. The siNA are useful for modulating
CC (downregulating) the expression of VEGFR genes. The siNA are potentially
CC useful for treating a wide range of angiogenesis-associated conditions,
CC particularly cancers, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC drug screening, target identification and validation, genetic
CC engineering, studying gene function, and also for gene mapping (e.g. of
CC single-nucleotide polymorphisms). The present sequence is used in the
CC exemplification of the present invention.

PT   Analyzing mutations of a target nucleic acid by detecting heteroduplexes
PT   from generated duplexes, useful for diagnosing patients affected with
PT   polycystic kidney disease.
XX
PS   Disclosure; SEQ ID NO 83; 126pp; English.
XX
CC   The invention relates to a novel method of mutation analysis of a target
CC   nucleic acid which comprises incubating a sample having the target
CC   nucleic acid in a reaction mixture, in the presence of at least one first
CC   and second nucleic acid, where incubation produces amplified products,
CC   generating duplexes in the amplified products and detecting the presence
CC   or absence of a heteroduplex from the duplexes, where its presence
CC   indicates a potential mutation in the target nucleic acid and its absence
CC   indicates the absence of mutation in the target nucleic acid. The method
CC   and compositions of the invention may be useful for analysing mutation
CC   and diagnosing patients affected with PKD (polycystic kidney disease).
CC   The current sequence is that of a PCR primer of the invention which was
CC   used to amplify human polycystic kidney disease PKD-1 DNA.

PT Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
PT by selecting a target gene and measuring the functionality of the
PT nucleotide sequences that are complementary to a stretch of nucleotides
PT of the target sequence.
XX
PS Example 12; SEQ ID NO 611; 199pp; English.
XX
CC The invention relates to a novel method for selecting siRNA (short
CC interfering RNA) comprising selecting an siRNA molecule of 19-25
CC nucleoside bases by selecting a target gene and measuring the
CC functionality of sequences of 19-25 nucleotides in length that are
CC substantially complementary to a stretch of nucleotides of the target
CC sequence, where the functionality is dependent upon non-target specific
CC criteria. Also claimed are methods for gene-silencing, developing an
CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
CC sequence consisting of GGGAGAUAGUGAUGAAGUA; GAAGUACAUCCAUUAUAAG;
CC GUACGACAACCGGGAGAUA; AGAUAGUGAUGAAGUACAU; UGAAGACUCUGCUCAGUUU;
CC CAUGCGGCCUCUGUUUGA; UGCGGCCUCUGUUUGAUUU; GAGAUAGUGAUGAAGUACA;
CC GGAGAUAGUGAUGAAGUAC; and GAAGACUCUGCUCAGUUUG. The siRNA molecule
CC comprises a sense strand and an anti-sense strand. The siRNA molecule
CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
CC pairs. The kit comprises at least two siRNA, comprising a first optimised
CC siRNA and a second optimised siRNA. The method is useful in selecting
CC siRNA for generating a gene silencing reagent. The present sequence is
CC used in the exemplification of the invention. The sequence is shown in
CC the specification as DNA, but described as siRNA.

PT Novel nucleic acid comprising specific sequence capable of detecting
PT mutations in polycystic kidney disease-1 (PKD-1) or PKD-2 gene, useful
PT for detecting biomarkers of autosomal dominant polycystic kidney disease.
XX
PS Disclosure; Page 41; 195pp; English.
XX
CC The invention relates to a novel isolated nucleic acid capable of
CC detecting mutations in polycystic kidney disease (PKD-1) or PKD-2 gene,
CC comprising a specific sequence. The invention further comprises: a
CC nucleic acid biomarker for autosomal dominant polycystic kidney disease
CC (ADPKD), comprising a PKD-1 or PKD-2 nucleic acid sequence having one or
CC more novel nucleotide alterations chosen from identified ADPKD associated
CC alterations, as given in the specification; a polypeptide biomarker for
CC ADPKD, comprising a PKD-1 or PKD-2 polypeptide sequence having one or
CC more novel amino acid alterations chosen from identified ADPKD associated
CC alterations, as given in the specification; a method for diagnosing ADPKD
CC in an individual; and a method for determining in an individual the
CC presence or absence of a mutant PKD gene. The PKD mutation detecting
CC isolated nucleic acid or the ADPKD nucleic acid biomarker is useful in
CC diagnosing ADPKD in an individual, or determining the presence or absence
CC of a mutant PKD gene in an individual. This polynucleotide sequence
CC represents a human polycystic kidney disease specific primer used in the
CC detection method of the invention.

PT New multifunctional siNA molecule that directs cleavage of the first and
PT second VEGF or VEGFR target sequences via RNA interference, useful in
PT preparing a composition for treating cell proliferative disorders e.g.
PT cancers.
XX
PS Disclosure; SEQ ID NO 1677; 396pp; English.
XX
CC The invention relates to a multifunctional siNA molecule comprising a
CC structure having Formula MF-III and which directs cleavage of the first
CC and second VEGF or VEGFR target sequences via RNA interference. The
CC multifunctional siNA molecule is useful in preparing a pharmaceutical
CC composition for treating cell proliferative disorders, e.g. cancer. The
CC present sequence represents a VEGFR siRNA.

PT   in inhibiting disease related genes.
XX
PS   Claim 2; Page 204; 407pp; English.
XX
CC   The present sequence represents a preferred target sequence for an
CC   enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at the
CC   nucleotide base position indicated in the DE line. Regions of the mRNA
CC   that do not form secondary folding structures and that contain potential
CC   hammerhead and hairpin ribozyme cleavage sites were identified by
CC   computer analysis. Ribozymes directed against these mRNA sequences were
CC   designed and synthesised with modifications that improve their nuclease
CC   resistance. The ribozymes cleave the ICAM-1 target sequences and thereby
CC   inhibit ICAM-1 expression, making them useful for reducing transplant
CC   rejection and alleviating symptoms in patients with rheumatoid arthritis,
CC   asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to
CC   correct PI field.)

PT   Identifying new catalytic nucleic acid that modulates selected processes
PT   - especially ribozymes that cleave Raf RNA for treating cancer,
PT   restenosis, and also new ribozymes and modified nucleoside triphosphates
PT   used as antiviral agents and synthons.
XX
PS   Claim 177; Page 160; 259pp; English.
XX
CC   A method has been developed for the identification of a nucleic acid
CC   capable of modulating a process in a biological system. The method
CC   comprises: (a) introducing into the system a random library of nucleic
CC   acid catalysts (NAC) having a substrate binding domain (SBD), comprising
CC   a random sequence, and a catalytic domain (CD); and (b) identifying NAC
CC   in systems where modulation has occurred and/or determining the sequence
CC   of at least part of the SBDs in such systems. Nucleic acid molecules with
CC   endonuclease activity and catalytic activity, from the present invention,
CC   are used to modulate gene expression in plant and mammalian cells and to
CC   cleave target nucleic acid, particularly for treating systemic diseases
CC   caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic
CC   ascites and infection. They may also be used to detect genetic drift and
CC   mutations in diseased cells and to determine c-raf RNA. Specifically NACs
CC   with RNA-cleaving activity that modulate expression of the Raf gene, are
CC   used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or
CC   generally any condition associated with the level of c-raf. Introduction
CC   of sugar/phosphate modifications increases stability against nuclease and
CC   activity. AAV90922 to AAV93877 represent NACs that can be used in the
CC   method, specifically for modulating the expression of a Raf gene

PT   Oligonucleotide for targeted alterations of genetic sequences and for
PT   treating cystic fibrosis, comprises at least one mismatch and chemical
PT   modification.
```

```
XX
PS   Claim 7; Page 256; 294pp; English.
XX
CC   The present invention provides single-stranded oligonucleotides which can
CC   be used for the targeted alteration of genomic sequences, where the
CC   oligonucleotide has at least one mismatch compared with the genomic
CC   sequence to be altered. In particular, these sequences are directed at
CC   the following genes: adenosine deaminase, p53, beta-globin,
CC   retinoblastoma, BRCA1, BRCA2, CFTR, cyclin-dependent kinase inhibitor 2A
CC   (CDKN2A), APC, Factor V, Factor VIII, Factor IX, haemoglobin alpha locus
CC   1 (HBA1), haemoglobin alpha locus 2 (HBA2), MLH1, MSH2, MSH6,
CC   apolipoprotein E (APOE), LDL receptor (LDLR), UDP-glucuronosyltransferase
CC   (UGT1), amyloid precursor protein (APC), presenilin-1 (PSEN1) and
CC   presenilin-2 (PSEN2). These can be used in the gene therapy of diseases
CC   such as cancer, adenosine deaminase deficiency, cystic fibrosis,
CC   haemophilia, hypercholesterolaemia, thalassaemia, sickle cell anaemia,
CC   Alzheimer's disease, melanoma, adenomatous polyposis of the colon and
CC   various syndromes. The present sequence is one of the gene correcting
CC   oligonucleotides of the invention

PT   Oligonucleotide for targeted alterations of genetic sequences and for
PT   treating cystic fibrosis, comprises at least one mismatch and chemical
PT   modification.
XX
PS   Claim 7; Page 256; 294pp; English.
XX
CC   The present invention provides single-stranded oligonucleotides which can
CC   be used for the targeted alteration of genomic sequences, where the
CC   oligonucleotide has at least one mismatch compared with the genomic
CC   sequence to be altered. In particular, these sequences are directed at
CC   the following genes: adenosine deaminase, p53, beta-globin,
CC   retinoblastoma, BRCA1, BRCA2, CFTR, cyclin-dependent kinase inhibitor 2A
CC   (CDKN2A), APC, Factor V, Factor VIII, Factor IX, haemoglobin alpha locus
CC   1 (HBA1), haemoglobin alpha locus 2 (HBA2), MLH1, MSH2, MSH6,
CC   apolipoprotein E (APOE), LDL receptor (LDLR), UDP-glucuronosyltransferase
CC   (UGT1), amyloid precursor protein (APC), presenilin-1 (PSEN1) and
CC   presenilin-2 (PSEN2). These can be used in the gene therapy of diseases
CC   such as cancer, adenosine deaminase deficiency, cystic fibrosis,
CC   haemophilia, hypercholesterolaemia, thalassaemia, sickle cell anaemia,
CC   Alzheimer's disease, melanoma, adenomatous polyposis of the colon and
CC   various syndromes. The present sequence is one of the gene correcting
CC   oligonucleotides of the invention

PT   New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT   or as specific biomolecule capture probes for surface-enhanced laser
PT   desorption ionization, comprises human myosin-like protein hGDMLP-1.
XX
PS   Disclosure; SEQ ID NO 1653; 214pp; English.
XX
CC   The present invention describes a human genome-derived myosin-like
CC   protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
CC   1 can be used in gene therapy and vaccine production. The hGDMLP-1
CC   nucleic acids can be used as probes to detect, characterise and quantify
CC   hGDMLP-1 nucleic acids in samples, as amplification substrates, to
CC   provide initial substrates for the recombinant engineering of hGDMLP-1
CC   protein variants having desired phenotypic improvements, and for
CC   expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
CC   used as immunogens to raise antibodies that specifically recognise hGDMLP
CC   -1 proteins, as standards in assays used to determine the concentration
CC   and/or amount specifically of hGDMLP proteins, as specific biomolecule
CC   capture probes for surface-enhanced laser desorption ionisation, as
CC   therapeutic supplement in patients having specific deficiency in hGDMLP-1
CC   production, and in vaccines or for replacement therapy. The
CC   polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
CC   disorder associated with the expression of hGDMLP-1, in particular heart
CC   and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
CC   The present sequence represents an oligomer used in the screening of the
CC   hGDMLP-1 sequence in the exemplification of the present invention. N.B.
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO

XX
CC   The invention relates to enzymatic nucleic acids (I) i.e.
CC   ribozymes/DNAzymes/Zinzymes that target and modulate expression of, genes
CC   encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
CC   (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
CC   included are a composition comprising (I) and a carrier, administering
CC   (I) to a cell (by contacting the cell with the compound under conditions
CC   suitable for the administration), administering (I) to a cell (in
CC   conjunction with one or more other drug by contacting the cell with the
CC   compound and the other drug under conditions suitable for the
CC   administration), administering (I) to a mammal (by contacting the mammal
CC   with the compound under conditions suitable for the administration),
CC   treating (M1) a subject having endometriosis (by contacting a subject
CC   with, or administering to subject, a nucleic acid molecule (II) that
CC   modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
CC   (III) comprising (I) and administering to a mammal (I) (in conjunction
CC   with a chemotherapeutic agent comprising contacting the mammal with the
CC   compound and the chemotherapeutic agent under conditions suitable for the
CC   administration). (I) is administered to a mammalian cell, preferably
CC   human cell in the presence of a delivery reagent which is a lipid such as
CC   cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
CC   molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
CC   and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNAzyme, G-cleaver,
CC   or Amberzyme configuration. The enzymatic nucleic acids are useful for
CC   inhibiting ocular angiogenesis associated with diabetic retinopathy or
CC   age-related diabetic retinopathy, in a subject. They are also useful for
CC   inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
CC   treating a subject having a condition associated with an increased level
CC   of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
CC   cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
CC   cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
CC   nucleic acids are useful for treating a subject (preferably human) having
CC   endometriosis, psoriasis, age-related macular degeneration, proliferative
CC   diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
CC   wound healing, endometrial carcinoma, gynecologic bleeding disorders,
CC   irregular menstrual cycles, ovulation, premenstrual syndrome, and
CC   menopausal dysfunction. The enzymatic nucleic acids are useful for birth
CC   control by inhibiting ovulation or embryonic uterine implantation. The
CC   present sequence is a target sequence from the human VEGFR1/flt-1 mRNA.

XX
CC The invention relates to enzymatic nucleic acids (I) i.e.
CC ribozymes/DNAzymes/Zinzymes that target and modulate expression of, genes
CC encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
CC (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
CC included are a composition comprising (I) and a carrier, administering
CC (I) to a cell (by contacting the cell with the compound under conditions
CC suitable for the administration), administering (I) to a cell (in
CC conjunction with one or more other drug by contacting the cell with the
CC compound and the other drug under conditions suitable for the
CC administration), administering (I) to a mammal (by contacting the mammal
CC with the compound under conditions suitable for the administration),
CC treating (M1) a subject having endometriosis (by contacting a subject
CC with, or administering to subject, a nucleic acid molecule (II) that
CC modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
CC (III) comprising (I) and administering to a mammal (I) (in conjunction
CC with a chemotherapeutic agent comprising contacting the mammal with the
CC compound and the chemotherapeutic agent under conditions suitable for the
CC administration). (I) is administered to a mammalian cell, preferably
CC human cell in the presence of a delivery reagent which is a lipid such as
CC cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
CC molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
CC and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNAzyme, G-cleaver,

XX
CC   The invention relates to a novel polypeptide (I) comprising a sequence
CC   (S1) of myosin-like protein-1 (hGDMLP-1) having 2568 amino acids fully
CC   defined in the specification, a fragment of at least 8 amino acids of
CC   (S1), 95% deviation from (S1) which are conservative substitutions, and
CC   65% identity to (S1). A polypeptide of the invention acts as a agonist or
CC   antagonist of hGDMLP-1, or as an inhibitor of hGDMLP-1 activity. A
CC   pharmaceutical composition of the invention is useful for treating or
CC   preventing a disorder associated with decreased expression or activity of
CC   hGDMLP-1, such as a disorder of heart and/or skeletal muscle function.
CC   The present sequence represents a 17-mer nucleotide, used in the

PT   Measuring the expression or activity of a CYP enzyme in a subject by
PT   measuring the expression of the CYP enzyme gene or mRNA expression for
PT   the CYP enzyme in whole blood and normalizing the measured CYP enzyme
PT   gene or mRNA expression.
XX
PS   Example 5; SEQ ID NO 51; 73pp; English.
XX
CC   The invention relates to a novel method for measuring the expression or
CC   activity of a CYP (cytochrome P450), NAT1 (N-acetyltransferase 1) or NAT2
CC   (N-acetyltransferase 2) enzyme in a subject comprising measuring the
CC   expression of the enzyme gene or mRNA in whole blood and normalising the
CC   measured enzyme gene or mRNA expression, respectively. The method may be
CC   useful in measuring the expression or activity of an enzyme in a subject
CC   and for detecting and quantifying the presence of SNPs (single nucleotide
CC   polymorphisms) within an enzyme. Thus, the method of the invention may be
CC   utilised in order to predict the effectiveness or safety of a drug
CC   therapy, since the drug metabolising capability of an individual is
CC   affected by the isoenzymes present within that individual. The current
CC   sequence is that of a 5' biotinylated PCR primer which was used to
CC   amplify human CYP2D6 (debrisoquine 4-hydroxylase) DNA of the invention.

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 895; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
PT by selecting a target gene and measuring the functionality of the
PT nucleotide sequences that are complementary to a stretch of nucleotides
PT of the target sequence.
XX
PS Example 1; SEQ ID NO 51; 199pp; English.
XX
CC The invention relates to a novel method for selecting siRNA (short
CC interfering RNA) comprising selecting an siRNA molecule of 19-25
CC nucleoside bases by selecting a target gene and measuring the
CC functionality of sequences of 19-25 nucleotides in length that are
CC substantially complementary to a stretch of nucleotides of the target
CC sequence, where the functionality is dependent upon non-target specific
CC criteria. Also claimed are methods for gene-silencing, developing an
CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
CC sequence consisting of GGGAGAUAGUGAUGAAGUA; GAAGUACAUCCAUUAUAAG;
CC GUACGACAACCGGGAGAUA; AGAUAGUGAUGAAGUACAU; UGAAGACUCUGCUCAGUUU;
CC CAUGCGGCCUCUGUUUGA; UGCGGCCUCUGUUUGAUUU; GAGAUAGUGAUGAAGUACA;
CC GGAGAUAGUGAUGAAGUAC; and GAAGACUCUGCUCAGUUUG. The siRNA molecule
CC comprises a sense strand and an anti-sense strand. The siRNA molecule
CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
CC pairs. The kit comprises at least two siRNA, comprising a first optimised
CC siRNA and a second optimised siRNA. The method is useful in selecting
CC siRNA for generating a gene silencing reagent. The present sequence is
CC used in the exemplification of the invention.

PT Interference RNA agent useful for treating dyslipidemias, coronary artery
PT disease, diabetes, cancer or neurological disease, comprises sense
PT sequence and antisense sequence which has specific modifications.
XX
PS Example 5; SEQ ID NO 4349; 378pp; English.
XX
CC The invention describes a RNA interference (iRNA) agent (I) comprising a
CC sense sequence and an antisense sequence, where the sense sequences have
CC one or more asymmetrical 2'-O alkyl modifications, the antisense
CC sequences have one or more asymmetrical phosphorothioate modifications
CC and the antisense sequence targets a human gene sequence. Also described
CC are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100
CC levels or glucose-6-phosphatase levels in a subject; producing (I);
CC stabilising (I), involves selecting a sequence with activity and
CC introducing one or more asymmetrical modification in the sequence, where
CC the modification decreases nuclease sensitivity while not decreasing its
CC activity; a kit comprising (I) and instruction for its use; and a device
CC that can be dispense or administer a composition comprising (I). (I) is
CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
CC The subject is suffering from a disorder characterised by elevated or
CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
CC levels of cholesterol, and/or disregulation of lipid metabolism. The
CC disorder is chosen from the HDL/LDL cholesterol imbalance,
CC dyslipidaemias, hypercholestorolaemia, statin-resistant
CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC inhibit hepatic glucose production or for treating glucose-metabolism-
CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC lung cancer), neurological disease (e.g., Huntington disease or
CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC represents a human apolipoprotein B (ApoB) antisense oligonucleotide that
CC can be used to control ApoB gene expression.

CC   useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
CC   is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
CC   The subject is suffering from a disorder characterised by elevated or
CC   otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
CC   levels of cholesterol, and/or disregulation of lipid metabolism. The
CC   disorder is chosen from the HDL/LDL cholesterol imbalance,
CC   dyslipidaemias, hypercholestorolaemia, statin-resistant
CC   hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC   disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC   inhibit hepatic glucose production or for treating glucose-metabolism-
CC   related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC   treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC   lung cancer), neurological disease (e.g., Huntington disease or
CC   spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC   represents a human apolipoprotein B (ApoB) antisense oligonucleotide that
CC   can be used to control ApoB gene expression.

PT   Interference RNA agent useful for treating dyslipidemias, coronary artery
PT   disease, diabetes, cancer or neurological disease, comprises sense
PT   sequence and antisense sequence which has specific modifications.
XX
PS   Example 5; SEQ ID NO 1395; 378pp; English.
XX
CC   The invention describes a RNA interference (iRNA) agent (I) comprising a
CC   sense sequence and an antisense sequence, where the sense sequences have
CC   one or more asymmetrical 2'-O alkyl modifications, the antisense
CC   sequences have one or more asymmetrical phosphorothioate modifications
CC   and the antisense sequence targets a human gene sequence. Also described
CC   are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100
CC   levels or glucose-6-phosphatase levels in a subject; producing (I);
CC   stabilising (I), involves selecting a sequence with activity and
CC   introducing one or more asymmetrical modification in the sequence, where
CC   the modification decreases nuclease sensitivity while not decreasing its
CC   activity; a kit comprising (I) and instruction for its use; and a device
CC   that can be dispense or administer a composition comprising (I). (I) is
CC   useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
CC   is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
CC   The subject is suffering from a disorder characterised by elevated or
CC   otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
CC   levels of cholesterol, and/or disregulation of lipid metabolism. The
CC   disorder is chosen from the HDL/LDL cholesterol imbalance,
CC   dyslipidaemias, hypercholestorolaemia, statin-resistant
CC   hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC   disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC   inhibit hepatic glucose production or for treating glucose-metabolism-
CC   related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC   treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC   lung cancer), neurological disease (e.g., Huntington disease or
CC   spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC   represents a human apolipoprotein B (ApoB) antisense oligonucleotide that
CC   can be used to control ApoB gene expression.

PT   New interference RNA agent comprising sense sequence and antisense
PT   sequence having cholesterol moieties, useful for reducing apoB-100 levels
PT   or glucose-6-phosphatase levels.
XX
PS   Claim 2; SEQ ID NO 1395; 324pp; English.
XX
CC   The invention describes an interference RNA (iRNA) agent (I) comprising a
CC   sense sequence and an antisense sequence, where the sense sequence
CC   comprises one or more cholesterol moieties, and the antisense sequence
CC   targets a human gene sequence. The following are disclosed: a
CC   pharmaceutical composition comprising (I); and a device for administering
CC   (I) into a patient. (I) is useful for reducing apoB-100 levels or glucose
CC   -6-phosphatase levels in a subject. (I) targets a sequence identical to
CC   any one of sequences as given in the specification. (I) comprises a
CC   cholesterol moiety. The cholesterol moiety is coupled to a sense strand.
CC   (I) further comprises a second cholesterol moiety. The second cholesterol
CC   moiety is coupled to a sense strand. (I) has 21 or more nucleotides. The
CC   duplex region of (I) is 19 nucleotides in length. The subject is
CC   suffering from a disorder having elevated or otherwise unwanted
CC   expression of apo-B-100, elevated or otherwise unwanted levels of
CC   cholesterol, and/or disregulation of lipid metabolism. The disorder is
CC   chosen from HDL/LDL cholesterol imbalance, dyslipidaemia (e.g., familial
CC   combined hyperlipidaemia or acquired hyperlipidaemia),
CC   hypercholesterolaemia, statin-resistant hypercholesterolaemia, coronary
CC   artery disease, coronary heart disease and atherosclerosis, preferably
CC   statin-resistant hypercholesterolaemia. (I) is administered to a subject
CC   to inhibit hepatic glucose production or for treating glucose-metabolism-
CC   related disorders e.g., type-2 diabetes or glitaxzone-resistant diabetes.
CC   (I) has endonuclease or exonuclease resistance. This sequence represents
CC   a human apolipoprotein B (apoB) pallindromic sequence that may be useful
CC   as a target for antisense inhibition.

PT   New interference RNA agent comprising sense sequence and antisense
PT   sequence having cholesterol moieties, useful for reducing apoB-100 levels
PT   or glucose-6-phosphatase levels.
XX
PS   Claim 2; SEQ ID NO 1394; 324pp; English.
XX
CC   The invention describes an interference RNA (iRNA) agent (I) comprising a
CC   sense sequence and an antisense sequence, where the sense sequence
CC   comprises one or more cholesterol moieties, and the antisense sequence
CC   targets a human gene sequence. The following are disclosed: a
CC   pharmaceutical composition comprising (I); and a device for administering
CC   (I) into a patient. (I) is useful for reducing apoB-100 levels or glucose
CC   -6-phosphatase levels in a subject. (I) targets a sequence identical to
CC   any one of sequences as given in the specification. (I) comprises a
CC   cholesterol moiety. The cholesterol moiety is coupled to a sense strand.
CC   (I) further comprises a second cholesterol moiety. The second cholesterol
CC   moiety is coupled to a sense strand. (I) has 21 or more nucleotides. The
CC   duplex region of (I) is 19 nucleotides in length. The subject is
CC   suffering from a disorder having elevated or otherwise unwanted
CC   expression of apo-B-100, elevated or otherwise unwanted levels of
CC   cholesterol, and/or disregulation of lipid metabolism. The disorder is
CC   chosen from HDL/LDL cholesterol imbalance, dyslipidaemia (e.g., familial
CC   combined hyperlipidaemia or acquired hyperlipidaemia),
CC   hypercholesterolaemia, statin-resistant hypercholesterolaemia, coronary
CC   artery disease, coronary heart disease and atherosclerosis, preferably
CC   statin-resistant hypercholesterolaemia. (I) is administered to a subject
CC   to inhibit hepatic glucose production or for treating glucose-metabolism-
CC   related disorders e.g., type-2 diabetes or glitaxzone-resistant diabetes.
CC   (I) has endonuclease or exonuclease resistance. This sequence represents
CC   a human apolipoprotein B (apoB) pallindromic sequence that may be useful
CC   as a target for antisense inhibition.

PT Novel polynucleotide of molecular variants of Cytochrome P450 2D6
PT (CYP2D6) gene, capable of hybridizing to CYP2D6 gene, is useful in
PT diagnosing disease related to presence of molecular variant of CYP2D6
PT gene.
XX
PS Example 1; SEQ ID NO 19; 33pp; English.
XX
CC The invention relates to a polynucleotide (I) of molecular variants of
CC CYP2D6 gene, chosen from polynucleotide capable of hybridizing to CYP2D6
CC gene, where the polynucleotide consists of substitution of one or more
CC nucleotides at position corresponding to 4784, 4735 or 4087 of the CYP2D6
CC gene having a fully defined sequence (S1) of 9609 base pairs as given in
CC the specification. (I) is useful for identifying a diagnostic
CC composition, which involves (a) isolating (I) from several subgroups of
CC individuals, where one subgroup has no prevalence for CYP2D6 associated
CC disease, and one or more further subgroup(s) do have prevalence for a
CC CYP2D6 associated disease, and (b) identifying a single nucleotide
CC polymorphism by comparing the nucleic acid sequence of the polynucleotide
CC or the gene of one subgroup having no prevalence for a CYP2D6 associated
CC disease, with one or more further subgroup(s) having a prevalence for a
CC CYP2D6 associated disease. (I) is useful for diagnosing a disease related
CC to the presence of a molecular variant of a CYP2D6 gene or susceptibility
CC to such a disorder, which involves determining the presence of (I) in a
CC sample from a subject. (I) is useful for diagnosing whether a subject has
CC EM, IM or PM phenotype, and for determining whether an individual is at
CC risk for a toxic reaction, non-response, insufficient response, or
CC reduced metabolic activity of CYP2D6 to treatment with a CYP2D6
CC substrate. (I) is useful in selecting a subject suffering from a CYP2D6
CC substrate treatable disease for treatment with the substrate, and in
CC treating a subject suffering from a CYP2D6 substrate treatable disease.
CC (I) is useful for detecting variant polynucleotide of CYP2D6 gene in a
CC sample, which involves contacting (I) with the sample under conditions
CC allowing interaction of variant of CYP2D6 gene with several immobilized
CC targets on (I), and determining the binding of the polynucleotide or the
CC gene to the immobilized targets on (I). (I) is useful for diagnosing a
CC disease, which involves binding of the variant polynucleotide of CYP2D6
CC gene or the gene to the immobilized targets on (IV), where the binding
CC indicates the presence or the absence of the disease or a prevalence for
CC the disease. The disease is codeine dependence, depression, hepatitis C,
CC psychosis, schizophrenia or Parkinson's disease. (I) is useful for
CC diagnosing an altered activity of the CYP2D6 enzyme, and for diagnosing a
CC polynucleotide associated with IM phenotype of CYP2D6. (I) is useful in
CC diagnosing individual's genetic constitution of the CYP2D6 status, useful
CC in personalized medicine. (I) is used for prediction of the therapeutic
CC outcome of an individual with an established drug and for avoidance of
CC side effects/toxicity due to altered activity of CYP2D6 mediated by
CC different CYP2D6 alleles. (I) is useful as forensic markers. This
CC sequence corresponds to a PCR primer to amplify the exon 6 region of the
CC CYP2D6 gene for detection polymorphisms.

PT   Determining whether a test compound inhibits tyrosine kinase activity in
PT   a mammal by exposing the mammal to the test compound and measuring in the
PT   mammal the level of at least one of the measured proteins or mRNA
PT   transcripts.
XX
PS   Example K; SEQ ID NO 42; 408pp; English.
XX
CC   The invention relates to a novel method for determining whether a test
CC   compound inhibits tyrosine kinase activity in a mammal comprising
CC   measuring in the mammal the level of at least one of the proteins and/or
CC   mRNA transcripts or genes for such proteins comprising type 1 plasminogen
CC   activator inhibitor (PAI-1), TIMP-1 (tissue inhibitor of
CC   metalloproteinase 1), vinculin, vascular endothelial growth factor
CC   (VEGF), placental growth factor (PLGF), VEGF/PLGF heterodimers or
CC   migration inhibitory factor (MIG), exposing the mammal to the test
CC   compound and then measuring in the mammal the level of at least one of
CC   the proteins and/or mRNA transcripts previously measured. The method of
CC   the invention may be useful for determining whether a test compound
CC   inhibits tyrosine kinase activity in a mammal. The current sequence is
CC   that of the Taqman probe which was used in the exemplification of the
CC   invention.

PT   Methods of evaluating transplant rejection.
XX
PS   Example 1; Page 17; 40pp; English.
XX
CC   The specification describes a method for evaluating transplant rejection
CC   in a host by detecting up-regulation of the expression of at least two
CC   immune activation marker genes chosen from perforin, granzyme B and Fas
CC   ligand. The method is particularly used for evaluation of acute rejection
CC   of a renal allograft. Simultaneous, or sequential evaluation of the
CC   biological sample for the presence or absence of an infectious agent acts
CC   a screening test, which is useful to differentially distinguish between
CC   acute rejection of the transplant or infection. PCR primers AAX35184-85
CC   were used to quantify the expression of a specific gene transcript

PT   New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT   or as specific biomolecule capture probes for surface-enhanced laser
PT   desorption ionization, comprises human myosin-like protein hGDMLP-1.
XX
PS   Disclosure; SEQ ID NO 1652; 214pp; English.
XX
CC   The present invention describes a human genome-derived myosin-like
CC   protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
CC   1 can be used in gene therapy and vaccine production. The hGDMLP-1
CC   nucleic acids can be used as probes to detect, characterise and quantify
CC   hGDMLP-1 nucleic acids in samples, as amplification substrates, to
CC   provide initial substrates for the recombinant engineering of hGDMLP-1
CC   protein variants having desired phenotypic improvements, and for
CC   expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
CC   used as immunogens to raise antibodies that specifically recognise hGDMLP
CC   -1 proteins, as standards in assays used to determine the concentration
CC   and/or amount specifically of hGDMLP proteins, as specific biomolecule
CC   capture probes for surface-enhanced laser desorption ionisation, as
CC   therapeutic supplement in patients having specific deficiency in hGDMLP-1
CC   production, and in vaccines or for replacement therapy. The
CC   polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
CC   disorder associated with the expression of hGDMLP-1, in particular heart
CC   and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
CC   The present sequence represents an oligomer used in the screening of the
CC   hGDMLP-1 sequence in the exemplification of the present invention. N.B.
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO

PT   Evaluating acute transplant rejection in a host especially in a recipient
PT   of a urinary system graft, by determining a heightened magnitude of
PT   expression of genes in rejection-associated gene clusters.
XX
PS   Example 1; Fig 1; 101pp; English.
XX
CC   The invention relates to evaluating acute transplant rejection in a host,
CC   comprising obtaining a sample, determining the magnitude of gene
CC   expression of at least two genes from one or more rejection associated-
CC   gene clusters, where the genes were selected from the pro-apoptotic
CC   cluster, the cytoprotective cluster, the IL-7/17, IL-8, IL-10, IL-15 and
CC   T cell clusters, comparing the results to a baseline magnitude of gene
CC   expression of the two genes and detecting upregulation of the two genes.
CC   The method is useful for evaluating acute transplant rejection in a host
CC   especially in a recipient of a urinary system (renal) graft, where gene
CC   expression in the urine sample of at least two genes of a pro-apoptotic
CC   gene cluster is determined. The method is further useful for treating a
CC   transplantation-related condition in a host. The method comprises
CC   choosing a therapy comprising adding to the host's baseline therapeutic
CC   regimen an effective dose of an anti-rejection agent appropriate, for
CC   treating rejection state. The anti-rejection agent is selected from
CC   azathioprine, cyclosporine, FK506, mycophenolate mofetil, anti-CD25
CC   antibody, antithymocyte globulin, rapamycin, ACE inhibitors, perillyl
CC   alcohol, anti-CTLA4 antibody, anti-CD40L antibody, anti-thrombin III,
CC   tissue plasminogen activator, antioxidants, anti-CD154, anti-CD3
CC   antibody. The therapy may further comprise modifying the host's baseline
CC   therapeutic regimen by adding pharmacological agent selected from
CC   antimicrobial agents, antiviral agents and antifungal agents or by
CC   reducing a dose of a baseline anti-rejection agent. The method accurately
CC   quantitate marker gene expression in biopsy tissue, urine, urine
CC   sediment, peripheral blood mononuclear and other body fluids and
CC   correlates the magnitude of expression of these genes with rejection of
CC   allografts. Moreover, the evaluation of the expression of marker genes in
CC   a post-transplant sample, along with the evaluation of the expression of
CC   an infectious agent gene also accurately detects allografts rejection.
CC   The is rapid and reliable for diagnosing acute rejection, even in cases
CC   where allograft biopsies show only mild cellular infiltrates. The present
CC   sequence is that of a PCR primer used for quantitation of gene expression
CC   by competitive template RT-PCR in a method of the invention

XX
CC   This sequence is a primer which as used in the amplification of a probe
CC   which was used in the isolation of the dbv gene cluster from Nonomuria
CC   sp. ATCC39727 (formerly Actinomadura sp. ATCC39727). The 37 proteins
CC   encoded by the dbv gene cluster are involved in the biosynthesis of the
CC   glycopeptide A40926. dbv ORF 1, 2, 5, and 37 encode polypeptides required
CC   for the synthesis of 4-hydroxy-phenylglycine residues of A40926. dbv ORF
CC   30-34 and 37 encode polypeptides required for the synthesis of 3, 5-
CC   dihydroxy-phenylglycine residues of A40926. dbv ORF 16, 17, 25, 26 and 36
CC   encode polypeptides required for the synthesis of heptapeptide skeleton
CC   of A40926. dbv ORF 10 encodes polypeptide required for the chlorination
CC   of the aromatic residues of A40926. dbv ORF 28 encodes a polypeptide
CC   required for the beta-hydroxylation of the tyrosine residue of amino acid
CC   6 of A40926. dbv ORF 11-14 encode polypeptides required for cross-linking
CC   of the aromatic residues of amino acids at positions 2 and 4, 4 and 6, 1
CC   and 3, and 5 and 7 of A40926. dbv ORF 9, 23 and 29 encode polypeptides
CC   required for addition and formation of N-acetyl glucuroamine residue of
CC   A40926. dbv ORF 20 or 27 encode polypeptides required for the attachment
CC   of mannosyl residues or N-methylation of A40926. dbv ORF 7, 18, 19, 24
CC   and 35 encode polypeptides required for the export of A40926 or its
CC   precursors. dbv ORF 3, 4, 6, and 22 encode polypeptides required for
CC   regulating the expression of one or more genes of the dbv gene cluster.
CC   The dbv gene cluster and the proteins encoded by it are useful for
CC   producing glycopeptide antibiotic A40926 or its precursor.

CC   The invention relates to a novel polypeptide (I) comprising a sequence
CC   (S1) of myosin-like protein-1 (hGDMLP-1) having 2568 amino acids fully
CC   defined in the specification, a fragment of at least 8 amino acids of
CC   (S1), 95% deviation from (S1) which are conservative substitutions, and
CC   65% identity to (S1). A polypeptide of the invention acts as a agonist or
CC   antagonist of hGDMLP-1, or as an inhibitor of hGDMLP-1 activity. A
CC   pharmaceutical composition of the invention is useful for treating or
CC   preventing a disorder associated with decreased expression or activity of
CC   hGDMLP-1, such as a disorder of heart and/or skeletal muscle function.
CC   The present sequence represents a 17-mer nucleotide, used in the
CC   invention for scanning the sequence represented in ACN63102

PT   Novel open reading frame polypeptide involved in biosynthetic pathway of
PT   teicoplanin, useful for producing glycopeptide antibiotic teicoplanin.
XX
PS   Example 1; SEQ ID NO 44; 175pp; English.
XX
CC   This sequence represents a primer which was used in the amplification of
CC   the probe dpgA. The amplified probe was used in the isolation of the tcp
CC   gene cluster which is involved in the biosynthesis of the glycopeptide
CC   teicoplanin. The isolated tcp sequence consists of 39 ORFs. Teicoplanin
CC   is a complex of closely related glycopeptide antibiotics produced by A.
CC   teichomyceticus. The tcp cluster is characterised by the presence of
CC   several ORFs that do not find homologues in the bal, cep, com and sta
CC   clusters. The glycopeptides encoded by the tcp cluster are useful for
CC   producing glycopeptide antibiotic teicoplanin. Fragments of the tcp
CC   cluster may be used for synthesizing 4-hydroxy-phenylglycine residues of
CC   teicoplanin, 3,5-dihydroxy-phenylglycine residue, heptapeptide skeleton
CC   of teicoplanin, for cross-linking of the aromatic residues of amino acids
CC   of teicoplanin, for the addition and formation of the two N-acyl-beta-D-
CC   glucosamine residues to the core structure of teicoplanin, for exporting
CC   teicoplanin or some of its precursors outside of the cytoplasm and for
CC   conferring resistance to teicoplanin to the producing strain, for
CC   regulating the expression of one or more genes of the tcp gene cluster,
CC   for the chlorination of the aromatic residues of amino acids of
CC   teicoplanin, for alpha-hydroxylation of the tyrosine residue of amino
CC   acid of teicoplanin, for attaching mannosyl residue of teicoplanin, and
CC   for the synthesis of teicoplanin.

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
PS Claim 4; Page 94; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

PT   Antisense oligonucleotides useful for inhibiting the expression of the
PT   human RhoG gene.
XX
PS   Claim 3; Col 27; 24pp; English.
XX
CC   AAZ25553 to AAZ25582 represent specifically claimed antisense
CC   oligonucleotides targeted to, and capable of inhibiting the expression of
CC   nucleic acids encoding human RhoG. RhoG is a member of the Rho subfamily
CC   of small GTPases the expression of which is associated with the induction
CC   of mitosis by mitogens. RhoG is thought to be required for entry into the
CC   DNA synthesis step of the cell cycle. It also effects the dynamic
CC   organisation of the actin cytoskeleton which regulates changes during
CC   cell cycle progression (e.g. cell rounding and pinching off during
CC   mitosis) and with determining the density to which cells will proliferate
CC   (RhoG affects an actin-dependent signal transduction pathway mediating
CC   the level of contact inhibition through surface signals). Additionally,
CC   RhoG is associated with the development of cancers (RhoG participates in
CC   a signalling pathway involving ras-mediated transformation). Antisense
CC   compounds from the present invention may be used for inhibiting the
CC   expression of human RhoG in cells and tissues in vitro and may be used
CC   diagnostically to determine the role of RhoG in various biochemical
CC   pathways (e.g. its role in mitosis, the organisation of the actin
CC   cytoskeleton and in cancer development)

PT   New antisense oligonucleotides used in treatment of, e.g. pulmonary
PT   vasoconstriction.
XX
PS   Disclosure; Page 74; 120pp; English.
XX
CC   The specification describes antisense oligonucleotides (AAX52869-X55271)
CC   directed against at least 2 mRNAs selected from target genes, coding and
CC   non-coding regions of RNAs corresponding to target genes, gene initiation
CC   codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
CC   -end and the juxta-section between coding and non-coding regions and all
CC   segments of RNAs encoding proteins associated with one or more diseases,
CC   conditions or mixtures. The antisense oligonucleotides may be derived
CC   from sequences AAX55272-74. These multiple target oligonucleotides
CC   (specifically AAX55180-271) can be used for the antisense treatment of
CC   diseases and conditions. Typical diseases and conditions are those
CC   associated with impaired respiration and inflammation, including lung
CC   diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
CC   acute asthma, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, pulmonary hypertension,
CC   pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary
CC   disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g.
CC   colon cancer, breast cancer, lung cancer, pancreatic cancer,
CC   hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as
CC   well as all types of cancers which may metastasize or have metastasized
CC   to the lungs, including breast and prostate cancer

XX
CC   The present invention describes a new composition comprising an antisense
CC   oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC   nucleic acids involved in bronchoconstriction, allergies, and/or
CC   inflammation. The ON can have antiinflammatory, antiallergic,
CC   antiasthmatic, cytostatic and analgesic activities. The compositions are
CC   useful for the treatment of diseases associated with inflammation,
CC   impaired airways, including lung disease and diseases whose secondary
CC   effects afflict the lungs of a subject. They can be used for treating
CC   e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC   impeded respiration, respiratory distress syndrome, pain, cystic
CC   fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC   pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC   carcinomas, and cancers which may metastasise to the lungs, including
CC   breast and prostate cancer. The reduction of the adenosine content of the
CC   ONs reduces side effects. The A-containing ONs break down with the
CC   release of deoxyadenosine which activates adenosine receptors causing
CC   bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC   nucleotide sequences given in the sequence listing from the present
CC   invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC   sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC   from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC   AAA33992) are specifically claimed ONs from the present invention. N.B.

XX
CC   The human Zsig24 gene encodes a membrane associated protein, and is
CC   linked to defects in glucose metabolism. The gene has been mapped to
CC   chromosome 11q23-24. The nucleic acids and the proteins they encode may
CC   be used to screen for defects in chromosome 11 that are associated with
CC   glucose metabolism and therefore may be involved in the development of
CC   obesity and diabetes. For example the peptides may be used to produce
CC   antibodies that may be used in immunoassays and the nucleic acids may be
CC   used as probes/primers for polymerase chain reaction analysis

XX
CC   The present invention describes low adenosine (A) content antisense
CC   oligonucleotides and compositions (I) comprising them. In the antisense
CC   oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC   (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC   immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC   The antisense oligonucleotides and (I) can be used to down-regulate the
CC   expression and or activity of target polypeptides associated with
CC   lung/respiratory disorders and malignancies, such as stimulating and
CC   activating peptide factors and transmitters, transcription factors,
CC   immunoglobulins and antibodies, antibody receptors, cytokines and
CC   chemokines, endogenously produced specific and non-specific enzymes,
CC   binding proteins, adhesion molecules and their receptors, cytokine and
CC   chemokine receptors, adenosine receptors, bradykinin receptors, central
CC   nervous system (CNS) and peripheral nervous and non-nervous system
CC   receptors, CNS and peripheral nervous and non-nervous system peptide
CC   transmitters, defensins, growth factors, vasoactive peptides and
CC   receptors, binding proteins and malignancy associated proteins. The
CC   antisense oligonucleotides may be used in this way to treat disorders
CC   including respiratory obstruction (especially pulmonary obstruction
CC   and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC   surfactant hypoproduction which are associated with a disease or
CC   condition selected from pulmonary vasoconstriction, inflammation,
CC   allergies, asthma, impeded respiration, respiratory distress syndrome
CC   (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC   pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC   and/or cancer. AAF18434 to AAF21543 represent human polynucleotide

PT   New antisense oligonucleotides for modulating the expression of inducible
PT   nitric oxide synthase in cells or tissues, particularly useful for
PT   treating e.g. immunological, cardiovascular or neurological disorders, or
PT   ischemia.
XX
PS   Claim 3; Page 84; 144pp; English.
XX
CC   The invention relates to antisense compounds, especially
CC   oligonucleotides, which are targeted to a nucleic acid encoding inducible
CC   nitric oxide synthase and which specifically hybridise to and modulate
CC   expression of inducible nitric oxide synthase. The antisense compounds
```

```
CC   have immunomodulator, antidiabetic, cardiovascular, cardiant,
CC   neuroprotective, disorder and vasotropic activity. The antisense
CC   oligonucleotides are useful for inhibiting the expression of inducible
CC   nitric oxide synthase in cells or tissues. In particular, the antisense
CC   oligonucleotides are useful for treating diseases or disorders associated
CC   with inducible nitric oxide synthase, e.g. diabetes, immunological
CC   disorder, cardiovascular disorder, neurological disorder or
CC   ischaemia/reperfusion injury. The antisense oligonucleotides are also
CC   useful for research and diagnostics. The present sequence is that of an
CC   antisense 2'-O-methoxyethyl gapmer oligonucleotide with a
CC   phosphorothioate backbone, a central "gap" region of ten nucleotides
CC   flanked by four nucleotide 2'-MOE (2'-methoxyethyl) wings (cytidine
CC   residues in the 2'-MOE wings are 5-methylcytidines) and targeted to human
CC   inducible nitric oxide synthase (NOS) mRNA (AAH47959)

PT   An antisense compound targeted to a nucleic acid molecule encoding a
PT   member of the human Rho family of small GTP binding proteins useful for
PT   treating e.g. cancer and ischemia.
XX
PS   Example 18; Page 81; 156pp; English.
XX
CC   This invention relates to an antisense compound targeted to a nucleic
CC   acid molecule encoding a member of the human Rho family of small GTP
CC   binding proteins, where the antisense compound inhibits the expression of
CC   the member of the human Rho family. The invention includes antisense
CC   oligonucleotides AAF94580 - AAF94637 which target a RhoA nucleotide
CC   sequence, AAF94645 - AAF94684 which target a RhoB nucleotide sequence,
CC   AAF94686 - AAF94725 which target a RhoC nucleotide sequence, AAF94727 -
CC   AAF94766 which target RhoG nucleotide sequence, AAF94769 - AAF94790 which
CC   target a Rac 1 nucleotide sequence and AAF94795 - AAF94809 which target
CC   cdc42 nucleotide sequence. The antisense compound is useful for treating
CC   hyperproliferative conditions, especially cancer, abnormal wound healing
CC   or clotting conditions and ischaemia/reperfusion or reoxygenation injury.

PT   New high bone mass (HBM) and Zmax1 genes and proteins useful for
PT   modulating bone mass for the treatment of e.g. osteoporosis.
XX
PS   Disclosure; Page 36; 443pp; English.
XX
CC   The present invention describes the human Zmax1 gene and the high bone
CC   mass (HBM) gene,which are found on chromosome 11q13.3. The Zmax1 and HBM
CC   genes have osteopathic activities. The genes can be used in gene therapy,
CC   antisense therapy and in the production of vaccines. They can be used in
CC   the diagnosis and treatment of bone disorders including osteoporosis,
CC   Paget's disease, sclerostosis, osteomalacia and fibrous dysplasia.
CC   ABA82038 to ABA82700 and AAG68168 to AAG68193 represent sequences used in

PT   Arraying genome clones.
XX
PS   Claim 4; Page 25; 528pp; Japanese.
XX
CC   The present invention describes a method of arraying genome clones. The
CC   method comprises: (a) clones of the genomic libraries contained in
CC   multiwell plates numbered for discrimination are mixed in each of the
CC   multiwell plates; (b) a primer designed based on the chromosome marker
CC   sequence is added to the mixture to carry out an amplification reaction;
CC   (c) a signal corresponding to the marker is detected from the resultant
CC   amplified product to specify the discrimination Nos. of the multiwell
CC   plates containing the clones having said marker sequence; (d) the order
CC   of the markers is changed so that the same discrimination Nos. succeed to
CC   the maximum in the specified discrimination Nos. to array the multiwell
CC   plates; (e) the clones in the multiwell plates of the specified
CC   discrimination Nos. are mixed respectively in each wells of longitudinal
CC   and lateral directions; (f) the mixed clones are cultured and the
CC   resultant cultures are amplified by using the above primer; (g) signals
CC   are detected from the amplified products; (h) the clones in the multiwell
CC   plates are specified from the detected result; and (i) the clones are
CC   reconstituted as the positions on the chromosome and arrayed. The
CC   microarray is useful for gene analysis. ABL42957 to ABL45322 represent
CC   PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
CC   represent PCR primers for human chromosome 21q22.1, which are
CC   specifically claimed for use in the present invention

PT Identifying molecules involved in lipid regulation, useful for
PT diagnosing, treating or preventing e.g., arteriosclerosis, comprises
PT identifying a molecule that binds to high bone mass gene or its
PT corresponding wild type gene.
XX
PS Disclosure; Page 41; 409pp; English.
XX
CC The invention relates to a method for identifying a molecule involved in
CC lipid regulation comprising identifying a molecule that binds to or
CC inhibits binding of a molecule to high bone mass (HBM) or its wild type
CC gene, Zmax1. Compounds identified by the method are useful for treating,
CC diagnosing, preventing or screening for normal and abnormal lipid-
CC associated conditions, including arteriosclerosis, cardiovascular
CC disease, stroke, and osteoporosis. The compounds may also be used in the
CC treatment or prevention of diabetic atherosclerosis, neurovascular
CC conditions caused by plaque build-up, poor circulation due to plaque
CC build-up and associated poor wound healing. The methods may be used in
CC gene therapy, pharmaceutical development, and diagnostic assays for bone
CC development disorders. Molecules identified by comparison of Zmax1 and
CC HBM systems can be used as surrogate markers in pharmaceutical
CC development, in diagnosis of human or animal bone disease, and in the
CC treatment of bone diseases. Sequences ABK22776-ABK23411 represent cDNA
CC molecules encoding human Zmax1 and HBM, and PCR primers, probes, linkers
CC and adapters of the invention

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 15; Page 76; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT   New transgenic animals (e.g. mice), useful as models for studying bone
PT   density modulation, developing drugs for treating or preventing bone
PT   diseases (e.g. osteoporosis), or diagnosing diseases characterized by
PT   reduced bone density.
XX
PS   Disclosure; Page 57; 603pp; English.
XX
CC   The invention relates to novel transgenic animals expressing the high
CC   bone mass (HBM) gene, expressing the corresponding wild type HBM gene,
CC   comprising an alteration of the gene encoding LRP5 or LRP6, or expressing
CC   an LRP5 that is modulated by an altered gene control sequence introduced
CC   by homologous or non-homologous recombination. The transgenic animals are
CC   for the study of bone density modulation or bone mass modulation. The
CC   invention has osteopathic and cytostatic activity. The polynucleotides of
CC   the invention may have a use in gene therapy. The transgenic animals and
CC   nucleic acids are for the study of bone density modulation, where the
CC   bone mass is modulated relative to non-transgenic animals of the same
CC   species in more than one parameter selected from bone density, bone
CC   strength, trabecular number, bone size, or bone tissue connectivity. The
CC   transgenic animals, nucleic acids and methods are useful for identifying
CC   molecules involved in bone development, and for developing pharmaceutical
CC   compositions, which may be employed for treating or preventing bone
CC   diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or
CC   neoplasms of the bone. The transgenic animals and nucleic acids are also
CC   useful in methods for diagnosing diseases involved in bone development,
CC   or characterised by reduced bone density or mass. The present sequence is
CC   used in the exemplification of the invention

PT   hyperproliferative disorders.
XX
PS   Example 6; SEQ ID NO 8; 92pp; English.
XX
CC   The present sequence is that of a 3' butanol end-blocked antisense
CC   oligonucleotide targeted to the casein kinase 2 alpha' subunit. In an
CC   example from the invention, this oligonucleotide was encapsulated in
CC   nanoparticles and examined for antitumour activity. An IC50 value against
CC   chemoresistant head neck carcinoma SCC-15 cells of 5.5% cisplatin IC50
CC   (molar basis) was determined. This is an example of antisense
CC   oligonucleotides of the invention that suppress the expression of protein
CC   kinase CK2 alpha', CK2 beta or CK2 alpha. Such oligonucleotides can be
CC   encapsulated in nanoparticles and delivered to a cell or tissue for use
CC   in cancer therapy. The cells are selected from glial cells, astrocytes,
CC   smooth muscle cells, myofibroblasts, vascular endothelial cells,
CC   leukaemic blasts, vascular endothelial cells in solid tumours, B-cell
CC   lymphoproliferative disease cells, acute myeloid leukaemic cells, glial
CC   tumour cells, breast cancer cells, small-cell lung cancer cells, ovarian
CC   cancer cells, colorectal cancer cells, blood vessel media cells, squamous
CC   cell carcinoma cells or epithelial-derived cancer cells (claimed).

PT   New collection of particles comprising a bioactive component, a
PT   surfactant molecule having an HLB value of less than about 6.0 units, a
PT   biocompatible polymer, and a cell recognition component, useful for
PT   treating cancer.
XX
PS   Example 6; Page 64; 90pp; English.
XX
CC   This sequence represents a fragment of a human casein kinase II (CK2)
CC   alpha subunit gene which was used as a molecular target for growth
CC   inhibition. These sequences were used in the new collection of particles
CC   of the invention which comprises a bioactive component, a surfactant
CC   molecule having an HLB value of less than about 6.0 units, a
CC   biocompatible polymer, and a cell recognition component. The collection
CC   has an average diameter of less than about 200 nanometers as measured by
CC   atomic force microscopy following drying of the collection of particles.
CC   The cell recognition component has a binding affinity for a cell
CC   recognition target consisting of cell adhesion molecules, immunoglobulin
CC   superfamily, cell adhesion molecules, integrins, cadherins, selectins,
CC   growth factor receptors, collagen receptors, laminin receptors,
CC   fibronectin receptors, chondroitin sulphate receptors, dermatan sulphate
CC   receptors, heparin sulphate receptors, keratan sulphate receptors,
CC   elastin receptors or vitronectin receptors. The particles may be used for
CC   delivering an anti-cancer agent to cancer cells by contacting the cancer
CC   cells with the collection of particles comprising the anticancer agents,
CC   a surfactant having an HLB value less than about 6.0 milts and a
CC   biocompatible polymer. The anticancer agent comprises a nucleic acid. The
CC   nucleic acid comprises an antisense sequence to a native human nucleic
CC   acid sequence. The antisense sequence is effective to inhibit expression
CC   of CK2. The anticancer agent comprises doxorubicin or an apoptotic agent.

PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 11698; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

PT New isolated Zsig24 polypeptide and polynucleotides encoding the
PT polypeptide, useful for diagnosing chromosome 11 abnormalities, or for
PT diagnosing obesity or type II diabetes in an individual e.g., Pima
PT Indian.
XX
PS Example 2; Page 29; 34pp; English.
XX
CC The invention describes an isolated polypeptide (I) comprising an amino
CC acid sequence which shares at least 70% or greater than 95% percent
CC identity with a fully defined human Zsig24 polypeptide sequence (S1). The
CC polynucleotide encoding Zsig24 is useful as a diagnostic reagent for
CC detecting a chromosome 11 abnormality in a subject, involving amplifying
CC nucleic acid molecules that encode Zsig24 from RNA isolated from a
CC biological sample of the subject, and detecting a mutation in the
CC amplified nucleic acid molecules, where the presence of a mutation
CC indicates a chromosome 11 abnormality. The polynucleotide is also useful
CC for diagnosing a metabolic disease (e.g., obesity or diabetes, preferably
CC type II diabetes) or susceptibility to a metabolic disease in an
CC individual (e.g., Pima Indian), where the disease is related to the
CC expression or activity of Zsig24 polypeptide comprising sequence of (S1)
CC in that individual. The method optionally involves amplifying nucleic
CC acid molecules that encode Zsig24 from RNA isolated from a biological
CC sample of the individual, and detecting a mutation in the amplified
CC nucleic acid molecules, where the presence of a mutation indicates
CC metabolic disease or susceptibility to a metabolic disease or amplifying
CC nucleic acid molecules that encode Zsig24 from RNA isolated from a
CC biological sample of the subject, and transcribing the amplified nucleic
CC acid molecules to produce Zsig24 mRNA, translating Zsig24 mRNA to produce
CC (I), and detecting a mutation (I). The methods are for identifying
CC polymorphisms in a new human gene that resides on chromosome 11q23-q24, a
CC locus linked with a heritable form of diabetes. This sequence represents
CC a primer used to locate the novel human membrane associated protein
CC Zsig24 gene to chromosome 11

```
PT   Pharmaceutical composition for treating asthma, has antisense
PT   oligonucleotide containing less percentage of adenosine, targeted to
PT   nucleic acids associated with lung airway or lung dysfunction, and
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 11699; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PT   Use of marker genes for monitoring, prognosing, diagnosing or treating
PT   renal disorders, e.g. renal diseases, injuries or toxicities, or for
PT   identifying agents for treating renal toxicity.
XX
PS   Example 1; Page 36; 58pp; English.
XX
CC   The invention relates to the use of marker genes for monitoring,
CC   prognosing, diagnosing or treating renal toxicity, identifying agents for
CC   treatment of renal toxicity or identifying agents that do not induce
CC   renal toxicity. The marker genes are selected from Calbindin-D28k, KIM-1
CC   (kidney injury molecule 1), OPN (osteopontin), EGF1 (epidermal growth
CC   factor), Clusterin, VEGF (Vascular Endothelial Growth Factor), Alpha-2u
CC   globulin related-protein, Complement component 4 (C4), Kidney-specific
CC   Organic Anion Transporter-K1 (OAT-K1), Aldolase A, Aldolase B, Podocin
CC   and Alpha-2u (lipocalin 2). The marker genes are useful for monitoring,
CC   prognosing, diagnosing or treating renal toxicity, identifying agents for
CC   treatment of renal toxicity or identifying agents that do not induce
CC   renal toxicity. The polymorphism in a gene is useful for the diagnostic
CC   of renal toxicity. The method also provides a test useful for determining
CC   whether a renal toxicity in a patient will respond to therapy. The
CC   present sequence represents a primer used in real-time quantitative PCR
CC   analysis of KIM-1 gene.

PT   Detecting methylation of 5' and promoter region of DD3 gene for
PT   diagnosing proliferative disorders comprising contacting target nucleic
PT   acid with a reagent that distinguishes between methylated and non-
PT   methylated CpG dinucleotide.
XX
PS   Claim 6; SEQ ID NO 78; 56pp; English.
XX
CC   The present invention relates to detecting the methylation state of the
CC   5' and promoter region of the gene DD3 within a subject comprising
CC   contacting a target nucleic acid having one or more sequences selected
CC   from 5 3581 base pair sequences in a biological sample with at least one
CC   reagent or a series of reagents. The method is useful for detecting the
CC   methylation state of the 5' and promoter region of the gene DD3 within a
CC   subject. The set of oligonucleotides comprising at least three of the
CC   oligomers is useful for detecting the cytosine methylation state and/or
CC   single nucleotide polymorphisms (SNPs) within SEQ. ID NO. 1-5 and its
CC   complementary sequences. The set of oligomers is also useful for
CC   detecting the methylation state of all CpG dinucleotides within SEQ ID
CC   NO. 1 and its complementary sequences. The set of at least two
CC   oligonucleotides can be used as primer oligonucleotides for the
CC   amplification of DNA sequences selected from SEQ ID NO. 1-5 and its
CC   complementary sequences. The DNA- and/or PNA-array is useful for
CC   analyzing diseases associated with the methylation state of the gene DD3
CC   comprising at least one nucleic acid. The methods, nucleic acids,
CC   oligonucleotide or PNA-oligomer, kit, array or the set of
CC   oligonucleotides is useful for the characterization, classification,
CC   differentiation, grading, staging, and/or diagnosis of cell proliferative
CC   disorders, or the predisposition to cell proliferative disorders. It can
CC   also be used for the therapy of cell proliferative disorders. The present
CC   sequence represents a detection oligonucleotide of the invention.

PT Identifying a pathogen in a biological sample, useful in medical
PT diagnosis, comprises amplifying a nucleic acid from the sample with a
PT pair of intelligent primers, and determining the molecular mass of the
PT amplification product.
XX
PS Example 15; SEQ ID NO 104; 228pp; English.
XX
CC This invention relates to a novel method for the rapid identification of
CC pathogens occurring in environmental samples or biological samples
CC derived from humans and animals. Specifically, it refers to using
CC intelligent primers to obtain an amplification product in order that the
CC molecular mass of the amplicon can be determined by mass spectroscopy,
CC which in turn identifies the pathogen found in the sample. The present
CC invention describes the rapid detection and identification of an
CC etiologic agent that does not required nucleic acid sequencing, and
CC instead relies on the use of intelligent primers to target ribosomal RNA
CC or housekeeping genes. Accordingly, this method can be used to identify a
CC pathogen or infectious agent in a biological sample, which is useful in
CC pharmacogenetic analysis and medical diagnosis (including cancer
CC diagnosis based on mutations and polymorphisms), or for detecting single
CC nucleotide polymorphisms in blood typing or stereotyping of viruses. This
CC oligonucleotide sequence is an intelligent PCR primer used to identify
CC different bacterial strains, given in an exemplification of the
CC invention.

XX
CC The invention relates to an isolated amino acid protein sequence selected
CC from an amino acid sequence appearing as ADR16922 or an amino acid
CC sequence comprising or consisting of the extracellular domain of
CC ADR16922(amino acids 23-1385). ADR16922 is encoded by the HBM (high bone
CC mass) allele of the human Zmax1 gene and has sequence similarity to LDL
CC receptors. Also disclosed are nucleic acids, proteins, cloning vectors,
CC expression vectors, transformed hosts, methods of developing
CC pharmaceutical compositions, methods of identifying molecules involved in
CC bone development, and methods of diagnosing and treating diseases
CC involved in bone development. Specifically disclosed is the Zmax1 gene
CC and the high bone mass (HBM) allele on chromosome 11q13.3 encoding
CC ADR16922. The protein is useful for treating, diagnosing, preventing, or
CC screening for normal and abnormal conditions of bone, including metabolic
CC bone diseases, e.g. osteoporosis. The present sequence is a PCR primer
CC used in the mapping of the Zmax1/HBM gene.

CC The invention relates to an isolated nucleic acid sequence encoding a
CC high bone mass protein (HBM). The gene exists in two alleles, Zmax1, the
CC notional wild-type (the cDNA for which appears as ADR47570 encoding
CC ADR47572) and the HBM allele (the cDNA for which appears as ADR47571
CC encoding ADR47573). The two alleles differ by a single nucleotide
CC polymorphism (G to T at position 582 of ADR47570) causing a Gly to Val
CC change at position 171 of the protein. Also included are a replicative
CC cloning vector comprising HBM/Zmax1 (and a replicon operative in an
CC isolated host cell), an expression vector comprising HBM/Zmax1 operably
CC linked to a transcription regulatory region, an isolated host cell
CC transformed with the vector(s), a method for testing a substance as a
CC therapeutic agent for bone modulation in a host, a method of identifying
CC a molecule involved in bone modulation, a method for identifying a
CC (candidate) protein involved in bone modulation,a method of testing for
CC HBM activity, a method of developing a pharmaceutical for the treatment
CC of bone development disorders, a method for treating a bone development
CC disorder in an animal, a method of altering bone development in a host, a
CC method for diagnostic screening for a genetic predisposition to a bone
CC development disorder, a diagnostic assay for bone development disorders,
CC a method of expressing the HBM protein in bone tissue, a bacterial
CC artificial chromosome comprising HBM/Zmax1 sequence (appearing as
CC ADR47574-ADR47580), a method for amplifying a nucleotide polymorphism in
CC the Zmax1 or HBM gene, a method for identifying a regulatory element of a
CC HBM gene and an isolated nucleic acid segment of at least 15 contiguous
CC nucleotides including a polymorphic site from HBM/Zmax1. The nucleic acid
CC molecule and the encoded polypeptide, composition, and methods are useful
CC in diagnosing, treating and preventing a bone development disorder, i.e.
CC osteoporosis. The gene for HBM/Zmax1 is located on chromosome 11q13.3.
CC The present sequence is a primer used in the mapping of the HBM/Zmax1
CC gene.

PT Use of an isolated proton-sensing GPCR polypeptide or polynucleotide in
PT developing a medicament for treating medical conditions in which proton
PT homeostasis is imbalanced.
XX
PS Example 11; Page 42; 83pp; English.
XX
CC The invention relates to isolated proton-sensing GPCR polypeptides and
CC polynucleotides useful in developing a medicament for treating diseases
CC and medical conditions in which proton homeostasis is imbalanced. The
CC invention also relates to a pharmaceutical composition comprising the
CC antibody, or agonist or antagonist of a proton-sensing GPCR polypeptide
CC for treating or preventing diseases and medical conditions in which
CC proton homeostasis is imbalanced, a method of screening for compounds
CC that stimulate or inhibit the function or expression level of the proton-
CC sensing GPCR polypeptides, a method of screening for compounds that
CC agonize or antagonize the proton-sensing activity of the GPCR
CC polypeptides and a diagnostic kit comprising the antibody against a
CC proton-sensing GPCR polypeptide or pharmaceutical preparation comprising
CC the antibody. Treating or preventing diseases and medical conditions in
CC which proton homeostasis is imbalanced comprises administering to a
CC subject the antibody, or agonist or antagonist of a proton-sensing GPCR
CC polypeptide. Screening for compounds that stimulate or inhibit the
CC function or expression level of a proton-sensing GPCR polypeptide
CC comprises measuring or detecting, quantitatively or qualitatively, the
CC binding of a candidate compound to the polypeptide (or to the cells or
CC membranes expressing the polypeptide) or its fusion protein by means of a
CC label directly or indirectly associated with the candidate compound,
CC measuring the competition of binding of a candidate compound to the
CC polypeptide (or to the cells or membranes expressing the polypeptide) or
CC a fusion protein thereof in the presence of a labeled competitor, testing
CC whether the candidate compound results in a signal generated by
CC activation or inhibition of the polypeptide using detection systems
CC appropriate to the cells or cell membranes expressing the polypeptide,
CC and detecting the effect of a candidate compound on the production of
CC mRNA encoding the polypeptide or the polypeptide in cells, using for
CC instance, an ELISA assay. The isolated proton-sensing GPCR polypeptides,
CC polynucleotides and antibodies that bind to the polypeptides are useful
CC in developing a medicament for treating or preventing diseases and
CC medical conditions in which proton homeostasis is imbalanced, e.g.,
CC osteoporosis. This sequence represents a reverse transcriptase PCR (RT-
CC PCR) primer used in expression profiling of human GPR4, used in the scope
CC of the invention.

PT New modified SecA protein, useful in microbial production of proteins,
PT provides a higher level of protein secretion than wild-type protein.
XX
PS Example; Page 33; 71pp; German.
XX
CC This invention describes a novel variant SecA protein (a translocation
CC ATPase) and its encoding polynucleotide which provides an increased level
CC of protein secretion, particularly hormones, enzymes, growth factors,
CC pharmaceutical proteins, or cytokines. The protein includes at least one
CC alteration in the amino acid regions that form the regulatory elements
CC IRA-1 and/or IRA-2, and is derived from Bacillus subtilis, B.
CC licheniformis, B. amyloliquefaciens, Staphylococcus carnosus, Escherichia
CC coli or Corynebacterium glutamicum. Most preferably the alterations are
CC in the 198-772 region of the S. carnosus protein or in region 442-767 of
CC the B. subtilis protein. Even a single mutation in secA can significantly
CC improve secretory activity. The invention also describes a method for
CC microbial production of proteins that includes expression of mutant secA
CC in a host cell which improves secretion and yield of the protein, and may
CC make possible secretion of proteins that are not normally secreted at
CC all. Preferably the microorganisms are the same species as those from
CC which the secA polypeptides are derived. The secA polynucleotides can be
CC labeled and used as probes for identification and/or isolation of genes
CC that encode proteins involved in protein secretion. A strain of B.
CC subtilis, designated RMA, was constructed in which the normal secA gene
CC was replaced by secA from S. carnosus. Suppressor mutants of RMA were
CC selected for inability to grow at 25degC and/or inability to produce
CC spores, indicative of changes in the inserted secA gene. The mutations
CC present in the suppressor mutants were identified, then transferred to
CC the secA gene of B. subtilis. The mutant strains of B. subtilis were then
CC tested for expression of alkaline phosphatase PhoB containing the
CC Leu15Gln mutation, which is normally secreted only very inefficiently in
CC the wild-type. This protein was secreted much more effectively by the
CC mutant strain. This sequence represents a PCR primer used to amplify the
CC S. carnosus wild type secA gene.

PT   Identifying candidate molecule involved in bone modulation, comprises
PT   identifying molecule that binds to Zmax1, high bone mass (HBM) protein,
PT   or both Zmax1 and HBM protein.
XX
PS   Disclosure; SEQ ID NO 517; 308pp; English.
XX
CC   The present invention relates to a method (M1) for identifying a
CC   candidate molecule involved in bone modulation. The method comprises
CC   identifying a molecule that binds to High Bone Mass protein (HBM) and/ or
CC   Zmax1 protein. The HBM gene exists in two alleles: Zmax1, the notional
CC   wild-type (the cDNA for which appears as AEB69299 encoding AEB69301 and
CC   AEB69939 encoding AEB69940) and the HBM allele (the cDNA for which
CC   appears as AEB69300 encoding AEB69302). The two alleles differ by a
CC   single nucleotide polymorphism (T to G at position 582 of AEB69299)
CC   causing a Gly to Val change at position 171 of the protein. The HBM
CC   protein has the property of causing elevated bone mass, while the Zmax1
CC   protein does not. The gene for HBM/Zmax1 is located on chromosome
CC   11q13.3. Also claimed is a method of pharmaceutical development for
CC   treating of bone development disorders, such as osteoporosis,
CC   osteomalacia, bone fractures, Paget's disease, etc., which comprises
CC   identifying a molecule that binds to the Zmax1 protein, or to HBM, or
CC   both. PCR primers AEB69364 - AEB69923 are for sequence-tagged site (STS)
CC   markers in the HBM region on chromosome 11q13.3, which were used to
CC   prepare a physical map of the Zmax1 region.

PT   Generating a siRNA expression library for selective post-transcriptional
PT   silencing of genes encoding a family of proteins comprises identifying a
PT   consensus sequence for protein families.
XX
PS   Example 2; SEQ ID NO 195; 44pp; English.
XX
CC   The invention relates to a method for generating a siRNA expression
CC   library for selective post-transcriptional silencing of genes encoding a
CC   family of proteins comprising identifying a consensus sequence for the
CC   family of proteins. The method comprises: (a) identifying a consensus
CC   sequence for the family of proteins; and (b) generating an siRNA
CC   expression library whose members encode siRNA molecules that target at
CC   least all mRNA encoding all known members of the family of proteins. The
CC   family of proteins is G coupled receptors, ion channels, receptor
CC   tyrosine kinases, non-receptor tyrosine kinases, nuclear hormone
CC   receptors, GTPases, ATPases, serine/threonine kinases, proteases, matrix
CC   metalloproteinases, GTPase-activating proteins or E3 ubiquitin ligases.
CC   Identifying a consensus sequences comprises identifying at least one, two
CC   or more signature motif for the family of proteins. The method is useful
CC   for generating a siRNA expression library for selective post-
CC   transcriptional silencing of genes encoding a family of proteins. The
CC   library is useful for identifying genes involved in disease processes.
CC   This sequence corresponds to an oligonucleotide used in the method of the
CC   invention.

PT Novel genetic variants of Cytochrome P450, Subfamily IID, Polypeptide 6
PT isogenes, useful for improving efficiency and reliability in drug
PT development for treating hypertension, arrhythmias and Parkinson's
PT disease.
XX
PS Claim 15; Page 18; 158pp; English.
XX
CC The invention relates to a method for haplotyping the cytochrome P450,
CC subfamily IID, polypeptide 6 (CYP2D6) gene (ABQ72215, ABQ72364) of an
CC individual, and also describes 29 novel polymorphic sites within the
CC human CYP2D6 gene. The CYP2D6 gene is located on chromosome 22q13.1 and
CC contains 9 exons which encode a 497 amino acid protein (ABB09563). CYP2D6
CC is a mono-oxygenase involved in the detoxification of many drugs and
CC environmental chemicals. It plays a role in the metabolism of drugs such
CC as antiarrhythmics, adrenoreceptor antagonists and tricyclic
CC antidepressants, and is also involved in the formation of a metabolite
CC linked to the drug-induced lupus syndrome observed with procainamide.
CC Variations in CYP2D6 activity or expression may also influence an
CC individual's susceptibility to environmentally-linked diseases, and it
CC has been demonstrated that CYP2D6 activity may be involved in the
CC pathogenesis of Parkinsons's disease, with individuals with a less active
CC form of the enzyme tending to have an earlier onset of this condition.
CC CYP2D6 nucleic acid sequences are useful in studying the expression and
CC function of CYP2D6, and in expressing CYP2D6 protein for use in screening
CC drugs for the treatment of CYP2D6-associated diseases (e.g.,
CC hypertension, atrial and ventricular arrhythmias, Parkinson's disease,
CC and drug-induced lupus syndrome) or which are metabolised by CYP2D6.
CC CYP2D6 nucleic acids and proteins are also useful in studying the effect
CC of polymorphisms on the biological activity of CYP2D6. Polymorphisms in
CC the target region may be determined by the use of allele-specific
CC oligonucleotides (ASOs; ABQ72217-ABQ72303) as probes and primers, and by
CC primer extension using oligonucleotide primers comprising sequences
CC ABQ72304-ABQ72361. The method of the invention is useful for haplotyping
CC the CYP2D6 gene in populations and in individuals, enabling decisions to
CC be made as to whether CYP2D6 is a likely therapeutic target for a disease
CC of interest, and to control for genetically-based bias in the design of
CC drugs that target or are metabolised by CYP2D6. In addition, transgenic
CC animals comprising a human CYP2D6 gene are useful for studying the
CC expression of CYP2D6 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted to or metabolised by CYP2D6, and for testing the
CC efficacy of therapeutic agents and compounds for treating CYP2D6-
CC associated conditions in a biological system. Sequences ABQ72246-
CC ABQ72303 represent specifically claimed allele-specific oligonucleotide
CC (ASO) primers used for detecting polymorphisms in the CYP2D6 gene

PT   Hormonal drug-containing agents for retarding conversion of hormone-
PT   dependent cancers into hormone-independent cancers, useful e.g. for
PT   treating prostate and breast cancers.
XX
PS   Example 1; Page 19; 31pp; Japanese.
XX
CC   The present invention describes a hormonal drug-containing agent (I) for
CC   retarding the conversion of a hormone-dependent cancer into a hormone-
CC   independent cancer. The agents can be used to treat prostate, breast,
CC   cervical and ovarian cancers and to make hormonal drugs for retarding the
CC   conversion of a hormone-dependent cancer into a hormone-independent
CC   cancer. The drug can retard the change of hormone-dependent cancers into
CC   hormone-independent cancers effectively. The present sequence represents
CC   a PCR primer which is used in an example from the present invention

PT   Novel therapeutic agent of hormone dependent cancer, comprising hormone
PT   group, chemical agent and differentiation inducing agent, useful for
PT   treating hormone dependent cancer in mammal.
XX
PS   Example 1; Page 14; 15pp; Japanese.
XX
CC   This invention relates to a novel therapeutic agent for the treatment of
CC   hormone dependent cancer that comprises a hormone group chemical agent
CC   and a differentiation inducing agent. Specifically, the hormone group
CC   chemical agent refers to an agonist derived from the luteinising hormone-
CC   releasing hormone (LH-RH), whereas the differentiation inducing agent is
CC   preferably a fat soluble vitamin, or can be a nuclear receptor ligand,
CC   histone acetylation regulation drug or a DNA methylation regulation drug.
CC   The present invention describes using the LH-RH agonist as a preventative
CC   or therapeutic agent for hormone dependent prostate, ovarian, uterine or
CC   breast cancer, and can also delay change in hormone independent cancer.
CC   Accordingly, the compositions of the invention are described as
CC   exhibiting high anti-tumour activity. This oligonucleotide sequence is a
CC   degenerate PCR primer used to amplify the insulin receptor, in an
CC   exemplification of the invention.

PT   Probe set for identifying human leukocyte antigen-DR allele in test
PT   sample of patients with e.g. cancer and diabetes, comprises probes
PT   corresponding to sequences such as DRB1.010101 or DRB1.0104.
XX
PS   Claim 2; SEQ ID NO 749; 87pp; Japanese.
XX
CC   This invention relates to a novel probe set for identifying a human
CC   leukocyte antigen (HLA)-DR allele in a test substance, which comprises
CC   probes with partial sequence containing base written in capital letter as
CC   fully defined in the HLA-DR allele list given in the specification. The
CC   invention is useful for identifying HLA-DR allele in a test sample. The
CC   probe set can identify HLA-DR alleles in patients with organ transplant,
CC   cancer, diabetes and other multiple-factor diseases, and enables
CC   provision of tailored medical treatment to individual patients. The
CC   present sequence is that of a probe which is a member of a novel probe
CC   set of the invention.

PT   Identifying new catalytic nucleic acid that modulates selected processes
PT   - especially ribozymes that cleave Raf RNA for treating cancer,
PT   restenosis, and also new ribozymes and modified nucleoside triphosphates
PT   used as antiviral agents and synthons.
XX
PS   Claim 177; Page 160; 259pp; English.
XX
CC   A method has been developed for the identification of a nucleic acid
CC   capable of modulating a process in a biological system. The method
CC   comprises: (a) introducing into the system a random library of nucleic
CC   acid catalysts (NAC) having a substrate binding domain (SBD), comprising
CC   a random sequence, and a catalytic domain (CD); and (b) identifying NAC
CC   in systems where modulation has occurred and/or determining the sequence
CC   of at least part of the SBDs in such systems. Nucleic acid molecules with
CC   endonuclease activity and catalytic activity, from the present invention,
CC   are used to modulate gene expression in plant and mammalian cells and to
CC   cleave target nucleic acid, particularly for treating systemic diseases
CC   caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic
CC   ascites and infection. They may also be used to detect genetic drift and
CC   mutations in diseased cells and to determine c-raf RNA. Specifically NACs
CC   with RNA-cleaving activity that modulate expression of the Raf gene, are
CC   used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or
CC   generally any condition associated with the level of c-raf. Introduction
CC   of sugar/phosphate modifications increases stability against nuclease and
CC   activity. AAV90922 to AAV93877 represent NACs that can be used in the
CC   method, specifically for modulating the expression of a Raf gene

XX
CC   The present invention relates to the use of enzymatic nucleic acid
CC   molecules (e.g. ribozymes) to modulate gene expression. The invention
CC   also methods for their use to down regulate or inhibit the expression of
CC   genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine
CC   aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC   alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC   receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC   presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC   nucleic acid molecules used to inhibit the expression of the said genes
CC   include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC   zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC   for treating cancer, in particular breast cancer, Alzheimer's disease,
CC   diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC   diseases, hepatitis B infections, and hepatitis and hepatocellular
CC   carcinoma. The enzymatic nucleic acid molecules can also be used as
CC   diagnostic tools to examine genetic drift and mutations within diseased
CC   cells and to detect the presence of specific RNA in a cell. The present
CC   sequence represents a substrate/target sequence for a DNAzyme used in the
CC   examples of the present invention. Note: Some SEQ ID Nos are repeated
CC   more than once in the specification, but these have different sequences
CC   associated with them.

PT   Enzymatic nucleic acid molecules able to cleave separate RNA molecules
PT   are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
PT   obesity and heart disease.
XX
PS   Example 1; Page 294; 717pp; English.
XX
CC   The present invention relates to the use of enzymatic nucleic acid
CC   molecules (e.g. ribozymes) to modulate gene expression. The invention
CC   also methods for their use to down regulate or inhibit the expression of
CC   genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine
CC   aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC   alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC   receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC   presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC   nucleic acid molecules used to inhibit the expression of the said genes
CC   include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC   zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC   for treating cancer, in particular breast cancer, Alzheimer's disease,
CC   diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC   diseases, hepatitis B infections, and hepatitis and hepatocellular
CC   carcinoma. The enzymatic nucleic acid molecules can also be used as
CC   diagnostic tools to examine genetic drift and mutations within diseased
CC   cells and to detect the presence of specific RNA in a cell. The present
CC   sequence represents a substrate/target sequence for a ribozyme used in
CC   the examples of the present invention. Note: Some SEQ ID Nos are repeated
CC   more than once in the specification, but these have different sequences
CC   associated with them.

XX
CC   The present invention relates to the use of enzymatic nucleic acid
CC   molecules (e.g. ribozymes) to modulate gene expression. The invention
CC   also methods for their use to down regulate or inhibit the expression of
CC   genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine
CC   aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC   alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC   receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC   presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC   nucleic acid molecules used to inhibit the expression of the said genes
CC   include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC   zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC   for treating cancer, in particular breast cancer, Alzheimer's disease,
CC   diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC   diseases, hepatitis B infections, and hepatitis and hepatocellular
CC   carcinoma. The enzymatic nucleic acid molecules can also be used as
CC   diagnostic tools to examine genetic drift and mutations within diseased
CC   cells and to detect the presence of specific RNA in a cell. The present
CC   sequence represents a substrate/target sequence for a DNAzyme used in the
CC   examples of the present invention. Note: Some SEQ ID Nos are repeated
CC   more than once in the specification, but these have different sequences
CC   associated with them.

PT   New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT   or as specific biomolecule capture probes for surface-enhanced laser
PT   desorption ionization, comprises human myosin-like protein hGDMLP-1.
XX
PS   Disclosure; SEQ ID NO 2647; 214pp; English.
XX
CC   The present invention describes a human genome-derived myosin-like
CC   protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
CC   1 can be used in gene therapy and vaccine production. The hGDMLP-1
CC   nucleic acids can be used as probes to detect, characterise and quantify
CC   hGDMLP-1 nucleic acids in samples, as amplification substrates, to
CC   provide initial substrates for the recombinant engineering of hGDMLP-1
CC   protein variants having desired phenotypic improvements, and for
CC   expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
CC   used as immunogens to raise antibodies that specifically recognise hGDMLP
CC   -1 proteins, as standards in assays used to determine the concentration
CC   and/or amount specifically of hGDMLP proteins, as specific biomolecule
CC   capture probes for surface-enhanced laser desorption ionisation, as
CC   therapeutic supplement in patients having specific deficiency in hGDMLP-1
CC   production, and in vaccines or for replacement therapy. The
CC   polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
CC   disorder associated with the expression of hGDMLP-1, in particular heart
```

```
CC   and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
CC   The present sequence represents an oligomer used in the screening of the
CC   hGDMLP-1 sequence in the exemplification of the present invention. N.B.
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequence

PT   New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT   or as specific biomolecule capture probes for surface-enhanced laser
PT   desorption ionization, comprises human myosin-like protein hGDMLP-1.
XX
PS   Disclosure; SEQ ID NO 1655; 214pp; English.
XX
CC   The present invention describes a human genome-derived myosin-like
CC   protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
CC   1 can be used in gene therapy and vaccine production. The hGDMLP-1
CC   nucleic acids can be used as probes to detect, characterise and quantify
CC   hGDMLP-1 nucleic acids in samples, as amplification substrates, to
CC   provide initial substrates for the recombinant engineering of hGDMLP-1
CC   protein variants having desired phenotypic improvements, and for
CC   expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
CC   used as immunogens to raise antibodies that specifically recognise hGDMLP
CC   -1 proteins, as standards in assays used to determine the concentration
CC   and/or amount specifically of hGDMLP proteins, as specific biomolecule
CC   capture probes for surface-enhanced laser desorption ionisation, as
CC   therapeutic supplement in patients having specific deficiency in hGDMLP-1
CC   production, and in vaccines or for replacement therapy. The
CC   polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
CC   disorder associated with the expression of hGDMLP-1, in particular heart
CC   and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
CC   The present sequence represents an oligomer used in the screening of the
CC   hGDMLP-1 sequence in the exemplification of the present invention. N.B.
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO

PT   New human kidney tumor overexpressed membrane (KTOM1) protein and nucleic
PT   acids encoding the protein, useful for treating subjects having defects
PT   in KTOM1 which can manifest as cancer of the kidney, or as a disorder of
PT   e.g., liver or bone.
XX
PS   Example 2; Page 172; 418pp; English.
XX
CC   The invention relates to a novel isolated nucleic acid encoding human
CC   KTOM1 (kidney tumour overexpressed membrane) protein. The protein of the
CC   invention has cytostatic activity. The nucleotide may have a use in gene
CC   therapy. The KTOM1 nucleic acids may be used to diagnose, treat or
CC   monitor a disease caused by altered expression of human KTOM1.
CC   Compositions comprising the nucleic acids, proteins or antibodies may be
CC   used to treat subjects having defects in KTOM1 which can manifest as
CC   cancer of the kidney, as well as a disorder of liver, bone marrow, brain,
CC   heart, lung, kidney, colon, skeletal muscle, testis, uterus and placenta
CC   function. The sequence represents a probe used in the invention to scan
CC   the nt 1-1001 portion of human KTOM1a (ABQ63232)

PT   New human kidney tumor overexpressed membrane (KTOM1) protein and nucleic
PT   acids encoding the protein, useful for treating subjects having defects
PT   in KTOM1 which can manifest as cancer of the kidney, or as a disorder of
PT   e.g., liver or bone.
XX
PS   Example 2; Page 173; 418pp; English.
XX
CC   The invention relates to a novel isolated nucleic acid encoding human
CC   KTOM1 (kidney tumour overexpressed membrane) protein. The protein of the
CC   invention has cytostatic activity. The nucleotide may have a use in gene
CC   therapy. The KTOM1 nucleic acids may be used to diagnose, treat or
CC   monitor a disease caused by altered expression of human KTOM1.
CC   Compositions comprising the nucleic acids, proteins or antibodies may be
CC   used to treat subjects having defects in KTOM1 which can manifest as
CC   cancer of the kidney, as well as a disorder of liver, bone marrow, brain,
CC   heart, lung, kidney, colon, skeletal muscle, testis, uterus and placenta
CC   function. The sequence represents a probe used in the invention to scan
CC   the nt 1-1001 portion of human KTOM1a (ABQ63232)

PT   Human leukocyte antigen (HLA) typing, useful for judging HLA genotypes of
PT   individuals e.g. by determining immunogenetic differences when
PT   transplanting between them.
XX
PS   Claim 10; Page 209; 345pp; Japanese.
XX
CC   The invention relates to a typing kit for judging human leukocyte antigen
CC   (HLA) genotype of a sample by hybridising a substrate on which 10-24 base
CC   oligonucleotides (ABL30512-ABL31809) originating in the sequences of
CC   genes e.g. belonging to HLA class I antigens on human genome and
CC   containing gene polymorphisms as alloantigens have been immobilised as
CC   primers for amplification of cleaved nucleic acids relating to gene
CC   polymorphisms. The method is useful for judging HLA genotypes of
CC   individuals by determining immunogenetic differences before transplanting
CC   between them, providing genetic information to decide compatibility of
CC   organ and tissue for transplantation e.g. of bone marrow, kidney, liver,
CC   pancreas, Langerhans islet in pancreas and cornea, susceptibility
CC   diagnosis of genetic diseases and identifying individuals

PT   New isolated nucleic acid, useful for treating viral diseases associated
PT   with tumors and cell degeneration, also related polypeptides, antibodies
PT   and transfected cells.
XX
PS   Disclosure; Page 133; 720pp; French.
XX
CC   The invention relates to a novel isolated 17 mer nucleic acid sequence,
CC   given in the specification, a sequence containing at least 15 consecutive
CC   nucleotides from the 17 mer sequence, a sequence with, after optimal
CC   alignment, at least 80 % identity to the 17 mer sequence, a sequence that
CC   hybridizes to them under highly stringent conditions, or the complement
CC   of any of them, or the corresponding RNA. The novel isolated nucleic
CC   acids of the invention are useful as probes and primers for detecting,
CC   identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
CC   component of a gene chip, in vitro as (anti)sense reagents, and for
CC   production of recombinant polypeptides. Any of the nucleic acids,
CC   polypeptides, vectors containing the nucleic acids, cells containing the
CC   vector or antibodies directed against the polypeptides are useful for
CC   preparation of pharmaceuticals for prevention and/or treatment of viral
CC   diseases that are characterised by development of tumours or cell
CC   degeneration, specifically cancer but also Alzheimer's disease and
CC   schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
CC   patient samples is useful for diagnosis and/or prognosis of these
CC   diseases. The polypeptides can also be used to generate antibodies, and
CC   both the polypeptide and antibodies are useful as components of protein
CC   chips. The nucleic acid sequences of the invention can be used in gene
CC   therapy. This polynucleotide sequence represents a tumour suppression
CC   related human fukutin oligonucleotide of the invention

PT   Novel enzymatic nucleic acid molecules which down regulates expression of
PT   a sequence encoding a subunit of nuclear factor kappa B useful for
PT   treating cancer, inflammatory disorders and autoimmune diseases.
XX
PS   Claim 3; Page 32; 72pp; English.
XX
CC   The invention describes an enzymatic nucleic acid molecule (I) which down
CC   regulates expression of a sequence encoding a subunit of nuclear factor
CC   kappa B (NFKB), where (I) is an inozyme, zinzyme, G-cleaver or amberzyme
CC   configuration. The enzymatic nucleic acid molecule is adapted to treat
CC   cancer and is useful for down-regulating REL-A activity in a cell, for
CC   treating a patient having a condition associated with the level of REL-A.
CC   (I) is useful for cleaving RNA comprising a sequence of REL-A gene, in
CC   the presence of a divalent cation, especially Mg^2^+. The enzymatic and
```

```
CC   antisense nucleic acid molecules are useful for treating breast, lung,
CC   prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,
CC   cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or
CC   multidrug resistant cancer. The method involves use of other drug
CC   therapies such as monoclonal antibodies, REL-A-specific inhibitors or
CC   chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,
CC   cyclophosphamide, doxorubin, fluorouracil carboplatin, edatrexate,
CC   gemcitabine or radiation therapy. The enzymatic and antisense nucleic
CC   acid molecules are also useful for treating inflammatory disease such as
CC   rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,
CC   obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft
CC   rejection, gene therapy applications, ischaemia/reperfusion injury
CC   (central nervous system (CNS) and myocardial), glomerulonephritis,
CC   sepsis, allergic airway inflammation, inflammatory bowel disease or
CC   infection. This sequence represents the substrate of a novel enzymatic
CC   nucleic acid molecule

PT New nucleic acid encoding human prostate membrane-specific antigen,
PT useful e.g. for treatment of tumors and viral infection, also related
PT polypeptide and antibodies.
XX
PS Disclosure; Page 547; 771pp; French.
XX
CC The invention relates to the isolation of 6327 nucleotide sequences,
CC fragments of at least 15 consecutive nucleotides of these nucleotides, a
CC sequence having at least 80% identity, after optimal alignment, with the
CC nucleotides, a sequence that hybridizes under stringent conditions with
CC the nucleotides, or the complement, or corresponding RNA, of the
CC nucleotides. The nucleotides are used as probes or primers for detecting,
CC identifying, quantifying and/or amplifying nucleic acids, as in vitro
CC sense and antisense sequences, of nucleotides involved in tumour
CC suppression or reversion, apoptosis and or viral resistance, to produce
CC recombinant polypeptides, and to prepare transgenic animals, as
CC experimental models. The nucleotides (also vectors containing them and
CC cells containing the vectors), the encoded polypeptides and antibodies
CC (Ab) against the polypeptide are useful for prevention and/or treatment
CC of viral infections or diseases characterized by development of tumours
CC or cell degeneration (e.g. Alzheimer's disease or schizophrenia).
CC Analysis of the expression of the nucleotides can be used for diagnosis
CC and/or prognosis of these diseases. The nucleotides and polypeptides can
CC also be used to screen for their specific interactive molecules,
CC potentially useful for treating diseases associated with abnormal
CC expression of the nucleotides.

PT New isolated or recombinant polypeptide for use in modulating a plant
PT growth trait in a flowering plant e.g. in Arabidopsis, Brassica, Zea, or
PT Oryza.
XX
PS Example 2; SEQ ID NO 177; 81pp; English.
XX
CC The invention describes an isolated or recombinant polypeptide (I)
CC comprising a sequence: (a) comprising 1 of 30 sequences (S1), as given in
CC the specification, or a conservative variant; (b) encoded by 1 of 30
CC sequences (S2), as given in the specification, or a conservative variant;
CC (c) encoded by a sequence that hybridises under stringent conditions to
CC S2; and (d) encoded by a sequence 70 % identical to S2. The expression or
CC activity of (I) is modulated to modulate a plant growth trait in a
CC flowering plant, of the family Brassicaceae, preferably in a plant that
CC is Arabidopsis, Brassica, Zea, Oryza, Triticum, Hordeum, Lolium, Sorghum,
CC Glycine, Medicago, Helianthus, Lactuca, Beta, Vitis, Solanum,
CC Lycopersicon, Capsicum, Gossypium, Hevea, Linum, Prunus, Citrus, Populus,
CC Pinus, or Quercus. A new method is used to detect genes for a plant
CC growth trait. This sequence represents a polynucleotide isolated from the
CC plant growth associated genes of the invention that can be used a a
CC primer, probe or genetic marker.

PT New nucleic acid sequences associated with tumor suppression, regression,
PT apoptosis or virus resistance are useful to diagnose and treat viral
PT disease, development of tumor cells and cell degeneration.
XX
PS Claim 1; Page 484; 798pp; French.
XX
CC This sequence represents an isolated nucleic acid sequence associated
CC with tumour suppression or regression, apoptosis or virus resistance. The
CC invention relates to these sequences or sequences having at least 80%
CC identity to them, and polypeptides encoded by the sequences or
CC polypeptides having 80% identity to the polypeptide sequences. The
CC invention is used to diagnose or treat viral disease or disease
CC characterized by development of tumour cells or cellular degeneration

XX
PT   Novel enzymatic nucleic acid that down-regulates expression of neurite
PT   growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT   protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
PS   Claim 59; SEQ ID NO 1752; 317pp; English.
XX
CC   The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC   that down regulate the expression or inhibit the function of a receptor
CC   for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC   IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC   invention are useful for treating: cerebrovascular accident, central
CC   nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC   lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC   restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC   disease, lupus, multiple sclerosis, transplant/graft rejection,
CC   ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC   conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC   nucleic acids of the invention are also useful for down-regulating the
CC   expression of a target gene and as a diagnostic tool to examine genetic
CC   drifts and mutations within diseased cells or to detect the presence of a
CC   target RNA in a cell. The present RNA sequence represents a human IKK-
CC   gamma substrate sequence.

PT   Novel enzymatic nucleic acids, ribozymes, which modulate expression of
PT   genes encoding vascular endothelial growth factor and/or VEGF receptor,
PT   useful for inhibiting tumor angiogenesis in cell, and for treating
PT   cancer.
XX
PS   Disclosure; SEQ ID NO 3572; 172pp; English.
XX
CC   The invention relates to enzymatic nucleic acids (I) i.e.
CC   ribozymes/DNAzymes/Zinzymes that target and modulate expression of, genes
CC   encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
CC   (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
CC   included are a composition comprising (I) and a carrier, administering
CC   (I) to a cell (by contacting the cell with the compound under conditions
CC   suitable for the administration), administering (I) to a cell (in
CC   conjunction with one or more other drug by contacting the cell with the
CC   compound and the other drug under conditions suitable for the
CC   administration), administering (I) to a mammal (by contacting the mammal
CC   with the compound under conditions suitable for the administration),
CC   treating (M1) a subject having endometriosis (by contacting a subject
CC   with, or administering to subject, a nucleic acid molecule (II) that
CC   modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
CC   (III) comprising (I) and administering to a mammal (I) (in conjunction
CC   with a chemotherapeutic agent comprising contacting the mammal with the
CC   compound and the chemotherapeutic agent under conditions suitable for the
CC   administration). (I) is administered to a mammalian cell, preferably
CC   human cell in the presence of a delivery reagent which is a lipid such as
CC   cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
CC   molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
CC   and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNAzyme, G-cleaver,
CC   or Amberzyme configuration. The enzymatic nucleic acids are useful for
CC   inhibiting ocular angiogenesis associated with diabetic retinopathy or
CC   age-related diabetic retinopathy, in a subject. They are also useful for
CC   inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
CC   treating a subject having a condition associated with an increased level
CC   of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
CC   cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
CC   cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
CC   nucleic acids are useful for treating a subject (preferably human) having
CC   endometriosis, psoriasis, age-related macular degeneration, proliferative
CC   diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
CC   wound healing, endometrial carcinoma, gynecologic bleeding disorders,
CC   irregular menstrual cycles, ovulation, premenstrual syndrome, and
CC   menopausal dysfunction. The enzymatic nucleic acids are useful for birth
CC   control by inhibiting ovulation or embryonic uterine implantation. The
CC   present sequence is a target sequence from the human VEGFR2/Kdr mRNA.

PT Vector containing nucleic acid associated with breast cancer, useful for
PT treating, diagnosing and characterizing breast cancer, also related
PT polypeptides and antibodies.
XX
PS Claim 1; SEQ ID NO 187; 61pp; English.
XX
CC The invention relates to a composition which contains at least one vector
CC (B) containing a nucleic acid (I) associated with breast cancer. The
CC vector (B), also polypeptides (II) encoded by (I), are used for treatment
CC of breast cancer. Arrays based on (I), (II), or their fragments, and (II)
CC -specific antibodies (Ab) are used to predict characteristics (e.g.
CC invasiveness or stage) of breast cancer, and (I), or its fragments, are
CC used to modulate characteristics of such cells; to identify breast cancer
CC genes and to detect breast cancer (by detecting polymorphic nucleic acid
CC or its products). The present sequence represents a human ER+ breast
CC cancer differentially expressed sequence.

PT New single nucleotide polymorphisms (SNPs) associated with rheumatoid

```
PT   arthritis (RA), useful in identification of individuals at risk of
PT   developing RA or other autoimmune disease, and in development of
PT   therapeutic agents.
XX
PS   Claim 21; SEQ ID NO 49938; 141pp; English.
XX
CC   The invention relates to an isolated nucleic acid molecule comprising at
CC   least 8 contiguous nucleotides where one of the nucleotides is a single
CC   nucleotide polymorphism (SNP) selected from any one of the nucleotide
CC   sequences of SEQ ID NOs:1-669 and 1339-49582, or their complements. The
CC   SNPs are useful as targets for the design of diagnostic reagents and the
CC   development of therapeutic agents, as well as for disease association and
CC   linkage analysis. In particular, the SNPs are useful for identifying an
CC   individual who is at an increased or decreased risk for developing an
CC   autoimmune disease such as rheumatoid arthritis, type 1 diabetes,
CC   multiple sclerosis, systemic lupus erythematosus, inflammatory bowel
CC   diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia,
CC   asthma, vitiligo, glomerulonephritis, Graves' disease, myocarditis,
CC   Sjogren disease, or primary systemic vasculitis. Methods associated with
CC   the SNPs are useful for early detection of the disease, for providing
CC   clinically important information for the prevention and/or treatment of
CC   the autoimmune diseases particularly rheumatoid arthritis, and for
CC   screening and selecting therapeutic agents. The SNPs are useful for human
CC   identification applications. The genes containing the SNPs are useful for
CC   treating the diseases defined above. The nucleic acid molecules are
CC   useful as hybridization probes for genotyping SNPs in messenger RNA,
CC   cDNA, genomic DNA, and genomic clones. The nucleic acid molecules are
CC   useful for constructing host cells expressing a part or all of the
CC   nucleic acid molecules and variant peptides, for constructing transgenic
CC   animals, for assaying or screening drugs that modulate nucleic acid
CC   expression, or for gene therapy in patients whose cells have aberrant
CC   gene expression. This sequence corresponds to a PCR primer which
CC   hybridises to the nucleic acids of the invention to amplify the SNP
CC   containing region. (Note: SEQ ID NOs 1-49582 are claimed and stated as
CC   being provided in the specification, however these sequences are not
CC   provided in the printed specification).

PS   Disclosure; SEQ ID NO 905; 0pp; English.
XX
CC   The invention relates to a novel polypeptide (I) comprising a sequence
CC   (S1) of myosin-like protein-1 (hGDMLP-1) having 2568 amino acids fully
CC   defined in the specification, a fragment of at least 8 amino acids of
CC   (S1), 95% deviation from (S1) which are conservative substitutions, and
CC   65% identity to (S1). A polypeptide of the invention acts as a agonist or
CC   antagonist of hGDMLP-1, or as an inhibitor of hGDMLP-1 activity. A
CC   pharmaceutical composition of the invention is useful for treating or
CC   preventing a disorder associated with decreased expression or activity of
CC   hGDMLP-1, such as a disorder of heart and/or skeletal muscle function.
CC   The present sequence represents a 17-mer nucleotide, used in the

XX
CC   The invention relates to a novel polypeptide (I) comprising a sequence
CC   (S1) of myosin-like protein-1 (hGDMLP-1) having 2568 amino acids fully
CC   defined in the specification, a fragment of at least 8 amino acids of
CC   (S1), 95% deviation from (S1) which are conservative substitutions, and
CC   65% identity to (S1). A polypeptide of the invention acts as a agonist or
CC   antagonist of hGDMLP-1, or as an inhibitor of hGDMLP-1 activity. A
CC   pharmaceutical composition of the invention is useful for treating or
CC   preventing a disorder associated with decreased expression or activity of
CC   hGDMLP-1, such as a disorder of heart and/or skeletal muscle function.
CC   The present sequence represents a 17-mer nucleotide, used in the
CC   invention for scanning the sequence represented in ACN63102

PT   Novel double-stranded short interfering RNA molecule having first
PT   nucleotide sequence complementary to RNA encoding HER2 or its portion,
PT   and second nucleotide sequence having complementarity to first sequence,
PT   useful for treating cancer.
XX
PS   Example 1; SEQ ID NO 2180; 143pp; English.
XX
CC   The invention relates to a double-stranded short interfering RNA (siRNA)
CC   molecule (I) comprising a first nucleotide sequence having 19-23
CC   nucleotides complementary to an RNA sequence encoding HER2 or its
CC   portion, and a second nucleotide sequence having 19-23 nucleotides
CC   exhibiting complementarity to the first sequence, and including at least
CC   one nucleotide that is not a 2'-OH containing ribonucleotide. Also
CC   described is a method of producing a class of nucleic acid-based gene
CC   modulating agents that exhibit a high degree of specificity for RNA of a
CC   desired target. (I) is useful for modulating HER2 activity in a cell, and
CC   for treating diseases or conditions related to levels of HER2 gene
CC   expression. (I) is useful for treating cancer, such as pancreatic cancer,
CC   bladder cancer, lung cancer, breast cancer or prostrate cancer. The
CC   present sequence represents a human H-Ras substrate RNA sequence for a
CC   DNAzyme (ribozyme), which is used in an example from the present
CC   invention for the identification of potential target sites in human Ras
CC   RNA.

CC   molecule (I) comprising a first nucleotide sequence having 19-23
CC   nucleotides complementary to an RNA sequence encoding HER2 or its
CC   portion, and a second nucleotide sequence having 19-23 nucleotides
CC   exhibiting complementarity to the first sequence, and including at least
CC   one nucleotide that is not a 2'-OH containing ribonucleotide. Also
CC   described is a method of producing a class of nucleic acid-based gene
CC   modulating agents that exhibit a high degree of specificity for RNA of a
CC   desired target. (I) is useful for modulating HER2 activity in a cell, and
CC   for treating diseases or conditions related to levels of HER2 gene
CC   expression. (I) is useful for treating cancer, such as pancreatic cancer,
CC   bladder cancer, lung cancer, breast cancer or prostrate cancer. The
CC   present sequence represents a human H-Ras substrate RNA sequence for a
CC   DNAzyme (ribozyme), which is used in an example from the present
CC   invention for the identification of potential target sites in human Ras
CC   RNA.

PT   Preparation of antisense oligo:nucleotide(s) which lack long runs of
PT   consecutive guanosine or inosine - and have specific ratio of residues
PT   able to form two or three hydrogen bonds, have greater activity and
PT   reduced toxicity, used therapeutically or to modulate growth of cells in
PT   culture.
XX
PS   Example 3; Fig 5c; 286pp; English.
XX
CC   AAV48564-708 represent antisense oligonucleotides directed against the
CC   junB and junD genes. Of these, only oligonucleotides AAV48565-614
CC   resulted in effective downregulation of negative growth control by JunB
CC   or JunD, while AAV48615-708 had little effect. The oligonucleotides
CC   exemplify the invention. The specification describes oligonucleotides
CC   that contain 8-30 nucleotides, which contain at most 8 nucleotides that
CC   can each form three hydrogen bonds to cytosine; do not contain four
CC   consecutive nucleotides able to form three H-bonds each to four
CC   consecutive cytosines; do not contain two sequences of three consecutive
CC   nucleotides each able to form three H-bonds to three consecutive
CC   cytosines, and the ratio between residues able to form two H-bonds each
CC   (2R) or three such bonds (3R) is given by 2R/3R = 0.33-0.72. The
CC   oligonucleotides are used to modulate expression of genes, particularly
CC   the genes for p53, ErbB-2, junB, junD, TGF-beta 1 or beta 2 to control
CC   proliferation of primary cell cultures (e.g. bone marrow stem, liver or
CC   kidney cells, osteoclasts, osteoblasts and/or keratinocytes). The
CC   oligonucleotides can also be used to analyse function of proteins (by
CC   altering their expression or activity) and therapeutically, e.g. in cases
CC   of cancer or (targeting TGF) for stimulating the immune system

PT   New antisense compound, that inhibits the expression of human cell
PT   surface adhesion receptor CD44, for treating hyperproliferative disorders
PT   and inflammatory conditions, such as cancer and rheumatoid arthritis.
XX
PS   Example 15; Page 77; 105pp; English.
XX
CC   The present sequence is one of a large number of antisense
CC   oligonucleotides designed to target different regions of the human CD44
CC   mRNA. CD44 is a multifunctional human cell surface adhesion receptor. The
CC   oligonucleotides were analysed for effect on CD44 mRNA levels by
CC   quantitative real-time PCR analysis. Antisense oligonucleotides that
CC   inhibit CD44 expression can be used to treat CD44-associated conditions
CC   including hyperproliferative disorders, such as cancer, and inflammatory
CC   conditions, such as rheumatoid arthritis. The antisense compounds
CC   hybridise to CD44 nucleic acids, thus allowing sandwich and other assays
CC   to be easily constructed. Note: The sequence has a phosphorothioate
CC   backbone and may be either an oligodeoxynucleotide or a chimeric
CC   oligonucleotide containing 2'-methoxyethyl (2'-MOE) wings and a deoxy
CC   gap. The ISIS number given above corresponds to the oligodeoxynucleotide
CC   sequence

PT   Antisense compounds which inhibit the expression of the human NF-kappa-B
PT   p65 subunit (p65) useful for treating diseases associated with p65
PT   expression and as prophylaxis to prevent of delay infection, inflammation
PT   or tumor formation.
XX
PS   Example 15; Col 41; 33pp; English.
XX
CC   The present sequence is one of a number of oligonucleotides designed to
CC   target different regions of the human NF-kappa-B p65 subunit, which is a
CC   member of the Rel/NF-kappa-B family of transcription factors. Rel/NF-
CC   kappa-B proteins are involved in a diverse set of signaling pathways
CC   involving stress, apoptosis, cancer, growth, infection and inflammation.
CC   Antisense oligonucleotides are able to inhibit expression of the p65
CC   subunit and may therefore be used in the treatment of disorders
CC   associated with NF-kappa-B p65 subunit expression. They may be used as a
CC   prophylaxis to prevent or delay infection, inflammation or tumour
CC   formation. Antisense compounds may also be used for research and
CC   diagnostics because they hybridise to nucleic acids encoding NF-kappa-B
CC   p65 subunit. The effect of antisense oligonucleotides on NF-kappa-B p65
CC   subunit mRNA levels was measured using real-time quantitative PCR and
CC   Northern blot analysis. Antisense oligonucleotides were synthesised on an
CC   automated DNA synthesiser

PT   Composition comprising enzyme which comprises heterologous functional
PT   domain that provides altered functionality in nucleic acid cleavage
PT   assay, useful for cleaving nucleic acid, and detecting presence of RNA
PT   target.
XX
PS   Claim 95; SEQ ID NO 2087; 1266pp; English.
XX
CC   This invention describes a novel composition comprising an enzyme which
CC   contains a heterologous functional domain that provides altered
CC   functionality in a nucleic acid cleavage assay. The enzyme comprises a 5'
CC   nuclease, preferably a thermostable 5' nuclease, or a polymerase which is
CC   altered in sequence related to a naturally occurring sequence of a
CC   polymerase such that it exhibits reduced DNA synthetic activity from that
CC   of the naturally occurring polymerase. Preferably the polymerase is a
CC   thermostable polymerase from a Thermus species such as T. aquaticus, T.
CC   flavus, T. thermophilus, T. filiformus or T. scotoductus. The enzyme
CC   comprises a heterologous functional domain, an amino acid sequence that
CC   provides an improved substrate binding activity in the nucleic acid
CC   cleavage assay and an amino acid sequence that provides improved
CC   background specificity in the nucleic acid cleavage assay. The invasive
CC   cleavage structure comprises a RNA target nucleic acid (a cytochrome
CC   P450, or cytokine RNA). Cleavage of the invasive cleavage structure
CC   generates an non-target cleavage product, which is then detected by
CC   detecting fluorescence, mass or fluorescence energy transfer or by
CC   detecting radioactivity luminescence, phosphorescence, fluorescence
CC   polarisation or charge. The enzyme is useful for cleaving a nucleic acid
CC   which involves exposing a sample (a cell lysate) comprising substrate
CC   nucleic acid to the enzyme which produces at least one detectable
CC   cleavage product. The enzyme is employed for detecting target DNAs and
CC   RNAs comprising wild-type and mutant alleles of genes including genes
CC   from humans, other animal or plants that are or may be associated with
CC   disease or other conditions. In addition, the enzymes may be useful for
CC   detecting and identifying strains of microorganisms including bacteria,
CC   fungi, protozoa, ciliates and viruses, preferably detecting and
CC   identifying viruses having RNA genomes, such as hepatitis C and human
CC   immunodeficiency virus.

PT   growth of the tumor cell.
XX
PS   Disclosure; Page 7; 28pp; English.
XX
CC   The invention relates to inhibiting growth of a tumour cell, involving
CC   introducing to the cell, p19(ARF) (or its mimetics), and p53 to inhibit
CC   growth of the tumour cell. p19(ARF) acts as a suppressor of oncogenic
CC   transformation by binding to the MDM2 (not defined) oncoprotein and
CC   blocking its ability to target associated proteins (such as Rb and p53)
CC   for proteosomal degradation. Also included is a pharmaceutical
CC   composition comprising p19(ARF), or comprising a nucleic acid encoding
CC   p19(ARF). The method is useful for inhibiting the growth of a tumour
CC   cell, and the treatment of cancer. A mutant of MDM2 was created (lacking
CC   amino acids 156-221) which was used to investigate the binding of
CC   p19(ARF) to MDM2. The present sequence is a PCR primer used to create a
CC   nucleic acid encoding the MDM2 mutant protein

PT   Detecting and differentiating between colon cell proliferative disorders
PT   associated with a gene or its regulatory regions comprises contacting a
PT   target nucleic acid in a biological sample obtained from the subject with
PT   a reagent.
XX
PS   Claim 36; Page 27; 74pp; English.
XX
CC   The invention relates to a novel method for detecting and differentiating
CC   between colon cell proliferative disorders associated with at least one
CC   gene or its regulatory regions. The method comprises contacting a target
CC   nucleic acid in a biological sample obtained from the subject with at
CC   least one reagent or a series of reagents, where the reagent or series of
CC   reagents, distinguishes between methylated and non methylated CpG
CC   dinucleotides within the target nucleic acid. The molecules of the
CC   invention demonstrate cytostatic activity whilst the method may useful
CC   for detecting and differentiating between colon cell proliferative
CC   disorders, including cancers such as colon adenoma and colon carcinoma.
CC   The PNA (peptide nucleic acid)-oligomers are useful as probes for
CC   determining cytosine methylation state or single nucleotide
CC   polymorphisms. The current sequence is that of the hybridisation
CC   oligonucleotide of the invention which was used to analyse the genomic
CC   DNA region.

PT   New antisense compound, having a sequence targeted to a nucleic acid
PT   encoding human NF-kappa-B p65 subunit, useful for preparing a composition
PT   for treating e.g., autoimmune disease or hyperproliferative disorder.
XX
PS   Claim 3; SEQ ID NO 46; 33pp; English.
XX
CC   The invention relates a new antisense compound, having a sequence
CC   comprising 8-50 bp targeted to a nucleic acid encoding human NF-kappa-B
CC   p65 subunit, specifically hybridises with the nucleic acid encoding human
CC   NF-kappa-B p65 subunit and inhibits its expression. Also included are a
CC   pharmaceutical composition, a method of inhibiting the expression of
CC   human NF-kappa-B p65 subunit in cells or tissues, and a method of
CC   treating an animal having or suspected of having a disease or condition
CC   associated with human NF-kappa-B p65 subunit. The compound is useful for
CC   preparing a composition for treating autoimmune disease e.g., multiple
CC   sclerosis or hyperproliferative disorder e.g., cancer, stress, apoptosis-
CC   related disease, inflammation, infection and growth disorders. The
CC   present sequence is a Human NF-kappa-B p65 subunit antisense
CC   oligonucleotide of the invention.

XX
CC   The invention relates to a kit for diagnosing and treating T-cell
CC   associated diseases which comprises a panel of nucleic acid primers
CC   specifically priming and allowing amplification of each Vbeta gene,
CC   VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC   rejection and diagnosing and treating T-cell associated diseases
CC   including autoimmune diseases, degenerative nervous system diseases,
CC   graft versus host disease, hypersensitivity diseases, infectious diseases
CC   and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC   atrophic gastritis. Degenerative nervous system diseases include multiple
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta microsatellite primer.

PT   Predicting responsiveness of a subject with breast cell proliferative
PT   disorder, useful for treating or differentiating breast cell
PT   proliferative disorders comprises analyzing methylation pattern of a
PT   genomic DNA from the subject.
XX
PS   Disclosure; SEQ ID NO 1656; 104pp; English.
XX
CC   The invention relates to a novel method for predicting the responsiveness
CC   of a subject with a cell proliferative disorder of the breast tissues to
CC   a therapy comprising analysing the methylation pattern of a target
CC   nucleic acid by contacting at least one of the target nucleic acids in a
CC   biological sample obtained from the subject prior to or during treatment.
CC   The method of the invention has cytostatic activity, and may have a use
CC   in gene therapy. The set of oligonucleotides comprising at least two of
CC   the oligomers are useful for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC   methods, nucleic acid, oligonucleotide, and kit are useful for the
CC   treatment, characterisation, classification and/or differentiation, of
CC   breast cell proliferative disorders. The method is also useful for
CC   predicting the responsiveness of a subject with a cell proliferative
CC   disorder of the breast tissues to a therapy. The present sequence is used
CC   in the exemplification of the invention.

PT   Identifying normal cell methylation range in locus of interest by
PT   modifying nucleic acids by cytosine-conversion, identifying sample with
PT   methylated CpG sites, producing methylation map, quantifying methylation
PT   ratio, establishing range.
XX
PS   Example 1; SEQ ID NO 37; 80pp; English.
XX
CC   This invention relates to a novel method of identifying a normal cell
CC   methylation range in a locus of interest. The method involves providing
CC   separately nucleic acids from samples and modifying the nucleic acids by
CC   cytosine-conversion, identifying samples with high to moderately
CC   methylated CpG sites, generating a methylation map, performing
CC   amplification of specific CpG sites, quantifying the unmethylated to
CC   methylated ratio and establishing a correlation between methylation and
CC   mRNA expression levels. The method is useful for identifying a normal
CC   cell methylation range, in order to allow for the detection of aberrant
CC   methylation, in a locus of interest in a nucleic acid, particularly at a
CC   CpG island. The invention is useful for detecting aberrant methylation in
CC   a locus of interest in a nucleic acid, particularly at a CpG island, of a
CC   subject and may be useful for diagnosis or prognosis of a disease in a
CC   subject. The disease is cancer chosen from breast cancer, prostate
CC   cancer, ovarian cancer, hepatocellular cancer and primitive
CC   neuroectodermal cancer. The invented method is preferably useful for
CC   screening samples for aberrant methylation of the CBFA2T3 gene and
CC   enables high sensitive and accurate quantification of CpG methylation at
CC   any given genetics locus. The present sequence is that of a PCR primer
CC   which was used for amplification of a region of the human CBFA2T3 gene in
CC   the exemplification of the invention.

XX
PT   Primer set for identifying killer-cell immunoglobulin-like receptor KIR
PT   allele or all of presently known KIR alleles, comprises primer pairs
PT   capable of producing amplicon having specific length from nucleic acid
PT   encoding KIR.
XX
PS   Example 1; Page 23; 32pp; English.
XX
CC   The invention relates to a novel primer set for identifying a killer-cell
CC   immunoglobulin-like receptor (KIR) allele or identifying all of the
CC   presently known KIR alleles, comprising a first primer pair that
CC   comprises a first primer and second primer, or several primer pairs
CC   capable of identifying all presently known KIR alleles, where the primer
CC   pairs are capable of producing an amplicon that is less than or 1000
CC   bases in length from a nucleic acid that encodes a KIR. The primer set is
CC   useful for detecting a KIR allele, in carrying out reverse transcriptase
CC   (RT)-PCR of KIR mRNA for expression analysis, and for identifying single
CC   KIR allele. The primer set is useful for defining or identifying KIR
CC   haplotypes, genotypes and polymorphic variations in an individual or in
CC   different populations, for identifying KIR compatible and incompatible
CC   stem cell transplant donor-recipient pairs and for studying if KIR
CC   mismatching between donor and recipient correlates with KIR epitope
CC   mismatch predicted by human leukocyte antigen (HLA). The primer set
CC   provides high resolution or allele level genotyping that primarily target
CC   polymorphism in the extracellular domains of the KIR genes. The sequences
CC   shown in (AEA12251-AEA12290) represent the primer set of the invention.
